

G3-144 144-174 MHz

VHF 3 dB Vertical Base Antenna Omni - Directional

Assemble the G3-144 as shown in fig.1, making sure to orient the drain hole in the phasing coil toward the bottom of the antenna. Then install the 3 radials to the mount as shown in fig. 1. Adjust the lengths of the antenna as specified in the tuning charts and using a reliable VSWR meter check the VSWR and adjust the lengths as needed. Install the U-bolts on the mount and using a 1" to 1 3/4" mast mount the antenna in the desired location.

Tuning: Using the tuning chart, adjust the lengths of sections X and Y. Using a reliable VSWR bridge, check the VSWR at the frequency to be used. If the VSWR is intolerable, lengthen section "Y" 1/4", if this makes the VSWR worse then shorten section "Y" 1/4" shorter than length given in the tuning chart. Continue to do this until a satisfactory VSWR is obtained.
