Important Safeguards

**WARNING: TO PREVENT FIRE OR ELECTRICAL SHOCK DO NOT EXPOSE TO RAIN OR MOISTURE**

An appliance and cart combination should be moved with care. Quick stops, excessive force and uneven surfaces may cause the appliance and cart combination to overturn.

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated “dangerous voltage” within the product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

**CAUTION: TO PREVENT ELECTRIC SHOCK, DO NOT USE THE THREE WIRE CORD WITH AN EXTENSION CORD RECEPTACLE OR OTHER OUTLET UNLESS THE BLADES CAN BE FULLY INSERTED TO PREVENT BLADE EXPOSURE.**

1. **Read Instructions**—All the safety and operating instructions should be read before the appliance is operated.
2. **Retain Instructions**—The safety and operating instructions should be retained for future reference.
3. **Heed Warnings**—All warnings on the appliance should be adhered to.
4. **Follow Instructions**—All operating and use instructions should be followed.
5. **Cleaning**—Unplug this appliance from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.
6. **Do Not Use Attachments**—not recommended by the manufacturer or they may cause hazards.
7. **Water and Moisture**—Do not place this product on an unstable cart, stand, tripod, bracket, or table. The product may fall, causing serious injury to a child or adult, and serious damage to the appliance.
8. **Accessories**—Do not place this product on an unstable cart, stand, tripod, bracket, or table. The product may fall, causing serious injury to a child or adult, and serious damage to the appliance.
9. **Ventilation**—This product should never be placed near or over a radiator or heat register. This product should not be placed in a built-in installation such as a bookcase or rack unless proper ventilation is provided or the manufacturer’s instructions have been adhered to. Any slots or openings in the cabinet are provided for ventilation. To ensure reliable operation of the video product and to protect it from overheating, these openings must not be blocked or covered. The openings should never be blocked by placing the product on a bed, sofa, rug, or other similar surface.
10. **Grounding or Polarization**—this product is equipped with a 3-wire line cord receptacle. It is intended for use with a 3-wire properly grounded power socket. Do not defeat the safety purpose of the supplied line cord and plug.
11. **Power Sources**—This product should be operated only from the type of power source indicated on the marketing label. If you are not sure of the type of power supplied to your home, consult your appliance dealer or local power company.
12. **Power-cord Protection**—Power-supply cords should be routed so they are not likely to be walked on or pinched by items placed upon or against them. Pay particular attention to cords at plugs, convenience receptacles, and the point where they exit.
13. **Lightning**—For added protection for this product during a lightning storm, or when it is left unattended and unused for long periods of time, unplug it from the wall outlet.

Limited Warranty

Palstar Inc. warrants products manufactured by it to be free from defects in material and workmanship under normal use and service for a period of one (1) year from the date of delivery to the first buyer (the “Warranty Period”). Palstar Inc’s obligation under this warranty is limited to repair or replacement of the product; at its option at the Palstar factory in Piqua, OH.

Effective only when the product is returned to the factory with all transportation charges prepaid and examination of the product discloses in Palstar’s judgment, to have been defective during the Warranty Period.

The Warranty Period shall not extend beyond its original term with respect to interim in-warranty repairs by Palstar. This Warranty Period shall not apply to any product which has been repaired or altered by anyone other than Palstar without prior written authorization. Warranty does not extend to any products which have been subject to damage from improper installation, application or maintenance in accordance with the operating specifications. Palstar neither assumes nor authorizes any person to assume for it any obligation or liability other than herein stated.

**Repair Policy**

When sending in a product for service, please “double” box it carefully and ship it insured for your protection. Please include a note clearly describing the problem, how you wish the item returned and how you wish to pay for the service. Package your unit properly. Palstar, Inc. is not responsible for merchandise damaged in shipment.

Our service rate is $30 per hour (1/2 hr. minimum).

**Return Policy**

All returns must receive prior authorization from Palstar. Returned items must be received in original—AS SHIPPED—condition including the original box, manuals, accessories, and copy of sales receipt. Returns must be within 14 days of purchase. Returned items are subject to a 25% restocking fee. Shipping is not refundable.
Notes

1. An SWR of 1:1 is best, but an SWR as high as 2:1 may be acceptable. Check your transmitter/amplifier manual for details.

2. If you cannot get an acceptable SWR, lengthen or shorten your antenna and/or feedlines and retune.

3. If you get low SWR readings at more than one setting, use the setting that gives:
- highest FORWARD power reading
- lowest REFLECTED power reading
- uses the largest capacitance (highest number) on the INPUT and AN-TENNA controls.

4. Once every 4-6 months clean the roller coil with 70% isopropyl alcohol and a clean cotton cloth. Do not transfer any of the conducting grease on the rod that guides the roller wheel as this will contaminate the windings on the roller coil body.

5. Any time a new or different antenna is connected, it is necessary to repeat the tuning procedure for each antenna.

14. Power Lines—An outside antenna system should not be located in the vicinity of overhead power lines, other electric light or power circuits, where it can fall into such power lines or circuits. When installing an outside antenna system, extreme care should be taken to keep from touching such power lines or circuits as contact with them may be fatal.

15. Overloading—Do not overload wall outlets and extension cords as this can result in a risk of fire or electric shock.

16. Object and Liquid Entry—Never push objects of any kind into this product through openings as they may touch dangerous voltage points or short-out parts that could result in a fire or electric shock. Never spill liquid of any kind on the product.

17. Servicing—Do not attempt to service this product yourself as opening or removing covers may expose you to dangerous voltage or other hazards. Refer all servicing to qualified service personnel.

18. Damage Requiring Service—Unplug this product from the wall outlet and refer servicing to qualified service personnel under the following conditions:
   a. When the power-supply cord or plug is damaged.
   b. If liquid has been spilled, or objects have fallen into the product.
   c. If the product has been exposed to rain or water.
   d. If the product does not operate normally by following the operating instructions. Adjust only those controls that are covered by the operating instructions. An improper adjustment may result in damage and will often require extensive work by a qualified technician to restore the product to its normal operation.
   e. If the product has been dropped or the cabinet has been damaged.
   f. When the product exhibits a distinct change in performance—this indicates a need for service.

19. Replacement Parts—when replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer or have the same characteristics as the original parts. Unauthorized substitutes may result in fire, electric shock or other hazards.

20. Safety Checks—Upon completion of any service or repairs to this product, ask the service technician to perform safety checks to determine that the product is in proper operating condition.

21. Outdoor Antenna Grounding—Before attempting to install this product, be sure the antenna or cable system is grounded so as to provide some protection against voltage surges and built-up static charges.
   a. Use No.10 AWG copper, No.8AWG aluminum, No.17AWB copper-clad steel or bronze wire or larger, as ground wire.
   b. Secure antenna lead-in and ground wires to house with stand-off insulators spaced from 4 feet to 6 feet apart.
   c. Mount antenna discharge unit as close as possible to where lead-in enters house.
   d. A driven rod may be used as the grounding electrode where other types of electrode systems do not exist. Refer to the National Electric Code, ANSI/NFPA 70-1990 for information.
   e. Use jumper wire not smaller than No.6 AWG copper or equivalent, when a separate antenna grounding electrode is used.
Thank you for purchasing a Palstar AT1500CV Antenna Tuner. This antenna tuner has been designed and manufactured to high quality standards, and will provide reliable operation for many years.

Please carefully read the Owner’s Manual in order to take advantage of the many interesting features that will provide years of enjoyable amateur radio operation.

7. Rotate the INPUT, ANTENNA and INDUCTOR controls for maximum noise or signal as heard on your receiver. Refer to preset tuning chart on page 12.
8. Key your transmitter and adjust the power level for a reading of 50-100 watts on the FORWARD scale. Adjust the INPUT, OUTPUT and INDUCTOR controls for a minimum REFLECTED reading while maintaining a FORWARD reading of 50-100 watts using your transmitter power control.
9. Read the SWR on the red scale at the point where the two needles intersect. Repeat TUNING the input and antenna controls until the lowest SWR reading is obtained. The SWR should be 2:1 or lower.

_This procedure takes patience the first time. The input and antenna controls vary the capacitors and provide fine adjustments. The roller inductor crank control provides coarse adjustment._

10. When you have tuned your antenna to the best SWR, record the settings of the INPUT, ANTENNA and INDUCTANCE controls on the chart above for future reference. When you retune, use these settings as your starting point.
Operating Your AT1500CV

Before Operating

1. To avoid possible damage to the AT1500CV set INPUT, OUTPUT, INDUCTOR, and POWER RANGE switches as outlined in the chart below before applying transmitter power.
2. Begin tuning with your transmitter/lamp into the tuner set at a low output power setting (50-100 Watts).
3. Set your transmitter/amplifier to a low power output. If your transmitter has a TUNE position, select that position.
4. If you use a linear amplifier, set it to Standby. Do not use the linear amplifier until the AT1500CV is tuned. Do not exceed 1200 watts average (single tone).
5. Set RANGE switch to 300 W (button out).

WARNING: DO NOT OPERATE THE AT1500CV WITH THE COVER OFF.

Tuning

1. Select the band and frequency of desired operation.
2. Set TUNE and INDUCTOR controls to the suggested setting before applying transmitter power (see chart).
3. Set your transmitter/amplifier to a low power output. If your transmitter has a TUNE position, select that position.
4. If you use a linear amplifier, set it to Standby. Do not use the linear amplifier until the AT1500CV is tuned. Do not exceed 1200 watts average (single tone).
5. Set RANGE switch to 300 W (button out).

The Palstar AT1500CV Antenna Tuner is an American made impedance matching network.

The AT1500CV optimizes the performance of your antenna and transmitter by providing adjustable impedance matching using a T-type circuit configuration.

The AT1500CV also measures the power and Voltage Standing Wave Ratio (VSWR or SWR) which allows you to tune the SWR to the lowest ratio possible for the selected transmission frequency.

The AT1500CV also features a precision steatite ceramic core roller inductor with a silver plated roller and roller shaft.

Front panel controls allow for selection between coax feed lines or end fed wire antenna or direct bypass which bypasses the impedance matching circuit but allows for the SWR, FORWARD, and REFLECTED power meter readings.

Tuning is achieved with the front panel mounted controls. The Vernier dials allow for tuning with precision and accuracy, while the Inductor crank handle facilitates coarse adjustments.

The range of the meter (300W/3000W) is selected by a push button switch located on the front panel.
Specifications

Front Panel Indicators and Controls

Metering  
Dual movement cross needle power and frequency compensated coupler

Controls

Input Tuning  
Variable capacitor 315 pF 4.5 kV 6:1 Vernier Drive

Antenna Tuning  
Variable capacitor 315 pF 4.5 kV 6:1 Vernier Drive

Inductance  
26 µH roller inductor 12 ga. wire wound on steatite ceramic core, silver plated shaft/wheel

Antenna Selector Switch  
6 position: Coax 1 tuned and tuner bypass  
Coax 2 tuned and tuner bypass  
Bypass and balanced antenna  
Switch wafers are ceramic (3kV rated)

Power Range Switch  
2 position 300 W /3000 W

Rear Panel Connectors

Coax 1  
SO239 connector

Coax 2  
SO239 connector

Bypass  
SO239 connector

RF INPUT  
SO239 connector

Balanced Line  
Dual High Voltage Nylon66™ terminal post

End –Fed Wire  
Dual High Voltage Nylon66™ terminal post

12 VDC Input  
Adaptor for meter light 2.1 mm con. (center positive)

Other

Frequency Coverage  
1.8 — 30 MHz

Power Maximum  
1500 W PEP SSB, 1200 W single tone continuous

Impedance Range  
20 to 1500 Ω 160 m to 10 m (assuming resistive load) Reduce power for lower Z range

Balanced Output  
4:1 Ruthroff voltage type balun

Dimensions  
4.5”H x 12.6”W x 12”D (incl. terminals)

Weight  
10 lbs.

Materials  
Chassis and top cover is 11 ga. (.090) aluminum that has been chem.-film treated in gold color. Front Panel powder coated and epoxy screened.

Front Panel Description

1. POWER/SWR METER  
Dual needle meter displays FORWARD and REFLECTED power in watts. SWR is measured where the two needles intersect on the red scale.

2. LAMP  
A two position button selects whether the meter is illuminated.

3. RANGE  
Two-position switch selects the range of FORWARD and REFLECTED power displayed on the power meter. When the RANGE button is out, the FORWARD meter scale reads 300 watts full scale and the REFLECTED meter scale reads 60 watts full scale. When the RANGE button is in, the FORWARD meter scale reads 3000 watts full scale and the REFLECTED meter scale reads 600 watts full scale.

4. INDUCTOR  
26 µH continuously variable ceramic roller inductor driven by a crank handle. Coupled to the crank handle is a gear-driven precision mechanical counter.

5. OUTPUT  
Continuously adjustable output capacitor.

6. INPUT  
Continuously adjustable input capacitor.

7. DIRECT-TUNED MODE SWITCH  
Six-position rotary switch selects an output coaxial connector.

a. DIRECT BYPASS selects BYPASS COAX connector bypassing the impedance matching circuit but providing SWR, FORWARD and REFLECTED power meter readings.

b. DIRECT COAX 1 selects COAX 1 connector bypassing the tuner matching circuit but providing SWR, FORWARD and REFLECTED meter readings.

c. DIRECT COAX 2 selects COAX 2 connector bypassing the tuner matching circuit but providing SWR, FORWARD and REFLECTED meter readings.

d. TUNED COAX 1 selects COAX 1 connector through the impedance matching T circuit.

e. TUNED COAX 2 selects COAX 2 connector through the impedance matching T circuit.

f. TUNED WIRE/BAL selects the END FED WIRE connector through the impedance matching circuit. For balanced antennas, the end fed wire antenna post must be connected to the balanced line post using a copper jumper strap.
END FED WIRE post connector for output to a single-wire antenna (do not connect to BALANCED OUTPUT). Ground post must be connected to a good RF ground.

BALANCED OUTPUT two nylon High Voltage post connectors for output to RF balanced wire fed antennas. Place copper strap jumper between lower post and END FED WIRE post to use balanced output.

GROUND post/wing nut type ground connector.

BYPASS coaxial connector for output to dummy load or third coax output. Bypasses tuner, but meter circuits are on if AC adapter is connected to jack located on rear panel.

FIGURE 1 REAR PANEL CONNECTORS

10 Installation cont’d.

12 VDC INPUT (2.1 mm plug) for supplied 12VDC ac adapter at 500mA to power the meter lamp and fan. Note: there is a ferrite TOROIDAL core on the end of the adapter connector to minimize the ingress of RF into the active circuits in the tuner.

Please do not remove RF INPUT coaxial connector for input from transmitter or amplifier.

COAX 1 coaxial connector for output to Antenna One.

COAX 2 coaxial connector for output to Antenna Two.

WARNING: Balanced antennas will produce high RF voltages at the output post connectors. RF burns may result if touched during transmission.

Unpacking
Carefully remove the AT1500CV from the shipping carton and inspect it for signs of damage. If any damage is apparent, notify the transportation carrier or dealer immediately. We recommend keeping the packing carton for moving, storing or reshipping the tuner to us for repair if required.

Location
Select a location for the AT1500CV that allows the connectors to be free from any possible contact during operation and with unrestricted air flow for cooling.

Installation Procedures
Connect a coax cable from your transmitter to the RF INPUT connector on the rear panel. Keep the cable as short as possible. If you use a linear amplifier, connect your transmitter to the linear amplifier input and the linear amplifier output to the AT1500CV. Do not use more than 1200 watts average (single tone) through the tuner.

Connect coax cable(s) from your antenna to COAX 1 or COAX 2 connectors on the rear panel. These connectors are either direct from the transmitter or through the tuned circuit depending on the setting of the DIRECT/TUNED mode switch on the front panel.

For a balanced feed antenna connect a balanced feed line to the upper white Nylon66™ BALANCED OUTPUT post (back panel) and connect a jumper to the lower white Nylon66™ BALANCED OUTPUT post.

If using a single wire antenna, connect it to the lower post with out installing a jumper.

Connect a dummy load to the BYPASS connector using a coax cable. This lets you select the dummy load from the DIRECT/TUNED mode switch. Any antenna that does not require the use of an antenna tuner may be connected to the BYPASS connector, if desired.
