Intelligibility. It’s the essential ingredient in voice communications. As field tests prove (and lab tests confirm) the Electro-Voice noise cancelling microphones perform best when the going gets toughest. E-V offers better cancellation over a wider range of frequencies, with a special advantage over common (and troublesome) low frequency noise.

But improved signal/noise ratio is just part of E-V superiority. E-V dynamics offer as much as 50% less total harmonic and IM distortion when compared to reluctance types, a clear advantage in critical voice communications.

And E-V hand-held models have improved RF shielding, a new positive-detent switch (you know when you’re on the air), high impact Cycolac® cases, and a host of other features. Indeed, the Model 602FTR is one of the few civilian products of any type to earn a military designation (M-109) with no more significant change than a new nameplate.

Your choice of dynamic, transistorized, or carbon models in hand-held or handset form. Plus the handsome new Model 607 stud-mounted, or Model 620 with unitized dispatcher stand. It’s the widest array of noise-cancelling microphones offered today. All from your local E-V microphone specialist. Write today for free catalog. It’s the first step (and the last word) in improved communications.
