

## HM118T DTMF Mic Mod

To use the Icom HM118T DTMF microphone with the following transceivers the RJ45 mic connector must be removed and replaced with a standard 8 pin mic connector:

*IC-746      IC-718      IC-756      IC-756PRO      IC-820H*  
*IC-821H      IC-910*

Procedure:

Cut the RJ45 connector from the mic cord and remove about 3/4 inch of the outer insulation exposing the colored wires.

The mic hot lead and shield are inside a heavy black wire, remove the black insulation to expose the shield and white wire.

Solder the mic cord wires to the new 8 pin mic connector as follows:
