Functions and features of Adobe® Acrobat® Reader®

The following functions and features can be used with Adobe® Acrobat® Reader®.

• **Keyword search**
  Click “Find” (Ctrl+F) or “Advanced Search” (Shift+Ctrl+F) in the Edit menu to open the search screen. This is convenient when searching for a particular word or phrase in this manual.
  *The menu screen may differ, depending on the Adobe® Acrobat® Reader® version.*

  ![Find screen](image1)
  ![Advanced search screen](image2)

  Click to open the find or search screen or advanced search screen.

• **Printing out the desired pages.**
  Click “Print” in File menu, and then select the paper size and page numbers you want to print.
  *The printing setup may differ, depending on the printer. Refer to your printer’s instruction manual for details.*
  *Select “A4” size to print out the page in the equalized size.*

• **Read Out Loud feature.**
  The Read Out Loud feature reads aloud the text in this Instruction Manual. Refer to the Adobe® Acrobat® Reader® Help for the details.
  *(This feature may not be usable, depending on your PC environment including the operating system.)*

• **Find screen**

  ![Find screen](image3)

• **Advanced search screen**

  ![Advanced search screen](image4)

*The screen may differ, depending on the Adobe® Acrobat® Reader® version.*
1. ADVANCED CONNECTIONS

137 kHz band operation (European version only)

You can also operate between 135.7 kHz to 137.8 kHz in the CW mode.
The RF signal from [X-VERTER] is used for this operation.

1. The output of [X-VERTER] is −20 dBm so an up to 1 W linear amplifier may be required.
2. See the connection illustration to the right.

- Be sure to turn OFF the transceiver and the amplifier when connecting them.
- To enable the [X-VERTER] connector, set the “Transverter Function” item to ON, or connect a DC voltage to [ACC 2 (6: TRV)] (⭐1).

- Set the offset frequency in the “Transverter Offset” item to “0.000 MHz” to match the transceiver’s operating frequency with the transmitting frequency.
- The antenna cannot be selected, and the internal antenna tuner cannot be used while the Transverter function is turned ON.
Connecting the RC-28

The optional RC-28 REMOTE ENCODER can be used as a sub dial.

**NOTE:**
- See the RC-28’s manual to use the RC-28 with the RS-BA1 IP REMOTE CONTROL SOFTWARE.
- Using the RC-28 with other than the USB cable supplied with the RC-28, or connecting it through a USB hub, is not guaranteed by Icom.

**Using the RC-28**

- **[TRANSMIT] LED**
  Lights while transmitting.
- **[LINK] LED**
  Lights while the RC-28 is connected to the transceiver.
- **Main dial**
  Changes the Sub band's operating frequency (default).
- **[F-1]/[F-2] LEDs**
  [F1] lights when operating the Main band, and [F-2] lights when operating the Sub band.
- **[F-1]/[F-2] buttons**
  Selects the Main band or Sub band to operate with the Main dial.
- **[TRANSMIT] button**
  Push to switch between transmit and receive.

* The [F-1] and [F-2] buttons or keys are disabled when “USB Dial Select” is set to “SUB Only.”

1. Setting the “USB Dial Select” to “MAIN/SUB” enables you to operate both the Main band and the Sub band, using the RC-28.

   MENU » SET > Connectors > USB DIAL > USB DIAL SELECT
1. ADVANCED CONNECTIONS

FSK, AFSK, PSK connections

The transceiver has a mode key for RTTY and PSK. You can use a PC and application software to operate RTTY and PSK using a USB cable. However, if you want to operate AFSK or other digital modes, you can use the ACC socket on the rear panel through an interface unit. See the interface circuit diagram below for details. Refer to the software application’s instruction manual for setup details. (Icom does not guarantee performance of the application software, PC, network device or network settings.)

When using the USB port

![USB connection diagram]

TIP:
• If you set the “USB Serial Function” item to “RTTY Decode,” the decoded RTTY signals are output from the USB port.
• Download the USB driver and the installation guide from the Icom website. http://www.icom.co.jp/world/index.html (Support > Firmware Updates/Software Downloads > Transceiver)

When using the ACC socket or the microphone connector

![ACC and MIC connector diagram]

• Connecting to [ACC 1]
• Connecting to [MIC]

NOTE: You cannot operate FSK RTTY when you connect the circuit to the microphone connector.

See pages 13-2 to 13-3 in the Basic Manual for details on the ACC 1 socket and MIC connectors.
1. ADVANCED CONNECTIONS

Connecting the AH-740

The optional AH-740 covers the 2.5 to 30 MHz range with a supplied whip antenna. Or when using with the optional NVIS kit, it covers the 2.2 to 30 MHz range. See the AH-740 instruction manual for installation and connection details.

Coaxial cable and control cable connections

About the ground strap connection

- Rubber vulcanizing tape, then electrical tape.
- Ground strap
- Vehicle chassis or body
2. ADVANCED OPERATIONS

Band Edge Beep

You will hear a Band Edge Beep and \textbf{TX} (“TX” with a border of short dashes) will be displayed when you tune into or out of an amateur band’s frequency range.

\textbf{Entering Band Beep Edges}

When the “Band Edge Beep” item is set to “ON (User)” or “ON (User) & TX Limit,” you can enter a total of 30 band beep edge frequencies.

\textbf{NOTE:}

- Initially, all band edges are entered. Therefore, you must first edit or delete them to enter a new band edge.
- You cannot enter an overlapped frequency or a frequency that is out of the preset transmit frequency band.

1. Open the “Band Edge Beep” screen.

\textbf{MENU} \Rightarrow \textbf{SET} > \textbf{Function} > \textbf{Band Edge Beep}

2. Select “ON (User)” or “ON (User) & TX Limit.”

\textbf{If you select “ON (User) & TX Limit,” you can limit transmission to within the entered frequency range.}

3. Select “User Band Edge.”

- The “User Band Edge” screen is displayed.

\textbf{Editing a Band Edge}

You can edit a band edge that is entered as a default, or when entering a new band edge.

1. On the FUNCTION set screen, select “User Band Edge.”
2. Touch the band edge you want to edit.

\textbf{Example:} 7: 14.000.000 – 14.350.000 MHz

3. Edit the lower band edge frequency.

\textbf{Example:} 14.1

\textbf{Entry examples}

- 14.025 MHz: [1], [4], [0], [1], [4], [5], [ENT]
- 18.0725 MHz: [1], [8], [0], [7], [2], [5], [ENT]
- 730 kHz: [0], [7], [3], [ENT]
- 5.100 MHz: [5], [ENT]
- Changing from 21.280 MHz to 21.245 MHz: [1], [4], [0], [1], [4], [5], [ENT]

4. Touch [ENT] to save the edited lower band edge frequency.

(Continued on the next page)
2. ADVANCED OPERATIONS

Band Edge Beep (continued)

Editing a Band Edge (Continued)

5. Edit the upper band edge frequency.
(Example: 14.25)

6. Touch [ENT] to save the edited upper band edge frequency.
   The edited band edge is saved and returns to the previous screen.

TIP:
• You can also edit the frequency by rotating [MAIN DIAL] or [MULTI].
• Each band edge must be higher in frequency than the ones above it. If you try to enter a lower frequency than the edge above, the lower frequency edge will be cleared when you push [ENT].

Inserting a Band Edge

After you edit the preset band edges, follow the steps below to insert a band edge.

1. Display the “User Band Edge” screen.
2. Touch the band edge you want to insert a new band edge above for 1 second.
   (Example: 1: 3.500.000 – 3.999.999 MHz)
   • The new band edge will be inserted above the selected band edge.

3. Touch “Insert.”

4. Enter the lower and upper band edge frequency.
   (Example: 18.000.000 – 19.999.999 MHz)
   • See Editing a Band Edge on the previous page for details on entering the band edge frequencies.

5. Touch [ENT] to save the entered band edge frequencies.
   • The entered band edge is saved and returns to the previous screen.
**2. ADVANCED OPERATIONS**

**Band Edge Beep (continued)**

**Entering a new Band Edge**

After you edit (or delete) the preset band edges, you can enter a new band edge.

1. Open the “User Band Edge” screen.
2. Select a blank band. (Example: 9)
3. Enter the lower and upper band edge frequency. (Example: 51.150.000 – 51.750.000 MHz)
   - See *Editing a Band Edge* on page 5 for details on entering the band edge frequencies.
4. Touch [ENT] to save the entered band edge frequencies.
   - The entered band edge is saved and returns to the previous screen.

**Deleting a Band Edge**

You can delete band edges doing the following steps.

1. On the FUNCTION set screen, select “User Band Edge.”
2. Touch the band edge you want to delete for 1 second. (Example: 1: 1.800.000 – 1.999.999 MHz)
3. Touch “Delete.”
   - The selected band edge is deleted and returns to the previous screen.

1.800.000 – 1.999.999 MHz is deleted.
Resetting all band edges to presets
The steps below will reset all the band edges to their initial settings. All entered settings will be deleted.

1. Display the “User Band Edge” screen.
2. Touch any band edge for 1 second.

3. Touch “Default.”

• Displays “Reset All Edges?”
4. Touch [YES].

• All the band edges will be reset to the initial settings.
### Adjusting the Drive Gain level

Adjust the transmitter level at the driver stage. This reduces distortion in the transmitting signal.

1. Touch the meter to display the ALC meter.
3. Touch “Drive Gain.”
   * The TX/RX indicator lights red and TX is displayed.
5. Rotate `[MULTI]` to adjust the Drive Gain level.
   * Returns to receive.

### IP Plus function

The IP Plus function improves the Intermodulation Distortion (IMD) quality by optimizing the direct sampling system performance.

This function optimizes the Analog/Digital Converter (ADC) against distortion when you receive a strong input signal. It also improves the Third-order Intercept Point (IP3) while minimizing the reduction of the receiver sensitivity.

Touch `[IP+]` on the side menu to turn the IP Plus function ON or OFF.

**ON:** Prioritizes the IP quality.

**OFF:** Prioritizes the receive sensitivity.
2. ADVANCED OPERATIONS

Tracking function

While in the Dualwatch operation, and when different antennas are set to the Main and Sub bands, using this function enables you to hear which antenna has better reception.

1. Push [MENU] to display the MENU screen.
2. Touch [TRACKING] for 1 second to turn ON the Tracking function.
   • The MAIN/SUB indicator blinks in blue.

3. Push [MAIN/SUB] to select the operating band (Example: Main band).
   • The MENU screen is closed.
   1. The Sub band’s operating frequency and mode are synchronized with the Main band’s.
   2. When using the RC-28, if the offset frequency is set between the Main band and the Sub band, the frequency changes with the offset amount when rotating [MAIN DIAL].

4. Hold down [MAIN/SUB] for 1 second to turn OFF the Tracking function.

The Tracking function will be canceled when:
• Starting a scan.
• Changing the operating band, or directly entering the operating frequency on the Sub band.
• Changing from the Memory mode and the VFO mode, vice versa, and so on.

TIP: Setting the “MAIN/SUB Tacking [MAIN/SUB] Switch” item to ON enables you to turn ON the Tracking function by holding down [MAIN/SUB] for 1 second.

MENU » SET > Function > MAIN/SUB Tracking [MAIN/SUB] Switch
VOX function

Mode: SSB, AM and FM

The VOX (Voice-Operated Transmission) function switches between transmit and receive with your voice. This function enables hands-free operation.

Diamond Adjusting the VOX function

Before using the VOX function, adjust the following items.
- VOX GAIN
- ANTI VOX
- DELAY
- VOICE DELAY

1. Touch [VOX] for 1 second.
   - Opens the VOX menu.

2. Touch the adjusting item.
   (Example: ANTI VOX)

3. Rotate \( \text{MULTI} \) to adjust the selected item.
   ① Adjust to the point where the transceiver does not switch to transmit due to the sound from the speaker or other devices.
   ② Touching VOICE DELAY selects “SHORT,” “MID,” “LONG” or “OFF.”

VOX GAIN
( Default: 50%)
Adjust the transmit/receive switching threshold level to between 0% and 100% for VOX operation. Higher values make the VOX function more sensitive to your voice.

ANTI VOX
( Default: 50%)
Adjust the ANTI VOX level to between 0% and 100% to prevent unwanted VOX activation from the speaker or other sounds. Higher values make the VOX function less sensitive.

DELAY
( Default: 0.2s)
Adjust the DELAY to between 0 and 2.0 seconds, for a convenient interval for normal pauses in speech before returning to receive.

VOICE DELAY
( Default: OFF)
Set the VOICE DELAY to prevent picking up your voice when switching to transmit. Select “SHORT,” “MID,” “LONG” or OFF.

Diamond Turning ON the VOX function

1. Set the operating mode to SSB, AM or FM.
2. Touch [VOX] to turn ON the VOX function.
   • “VOX” is displayed while the VOX function is ON.

   Displayed

① Touching [VOX] again turns OFF the VOX function.
2. ADVANCED OPERATIONS

**ΔTX function**

The ΔTX function shifts the transmit frequency up to ±9.99 kHz without shifting the receive frequency.

1. Push ΔTX.
   - The ΔTX function turns ON.
   - Pushing ΔTX turns the ΔTX function ON or OFF.
   - While using the Fine Tuning function (See Basic manual section 3), the ΔTX frequency is displayed in 4 digits, instead of 3.

2. Rotate RIT/ΔTX to set the ΔTX frequency to match the receiving station's frequency.

3. To turn OFF the ΔTX function, push ΔTX.

**Diamond ΔTX monitor function**

When the ΔTX function is ON, you can directly monitor the operating frequency by holding down XFC.

While monitoring, the TX/RX indicator lights green and the Noise Reduction, Notch Filter and Twin PBT settings are cleared.

①To reset the ΔTX frequency to “0.00,” hold down CLEAR for 1 second.
②While monitoring, you can add the frequency shift to the operating frequency by holding down ΔTX for 1 second.

①While monitoring, the TX/RX indicator lights green and the Noise Reduction, Notch Filter and Twin PBT settings are cleared.
Login/Operating CW (ADVANCED)

About the CW Reverse mode
The CW-R (CW Reverse) mode reverses the receive Beat Frequency Oscillator (BFO) to receive CW signals.
Use this when interfering signals are near the desired signal and you want to use the CW-R to reduce interference.

Using the Memory Keyer function (KEYER)
You can send preset characters using the Memory Keyer function.

Sending
1. Display the KEYER SEND screen.

2. Push [TRANSMIT].
   • The TX/RX indicator lights red.
   ① If you want to automatically switch between transmit and receive, turn ON the Break-in function (See Basic manual section 4).
3. Touch a Memory Keyer key between [M1] and [M8].
   (Example: [M1])
   • The touched Memory Keyer is sent.

   Key Action
   M1 ~ M8 Touch Sends the Memory keyer contents
   Touch for 1 second Ø is displayed and repeatedly sends the Memory keyer contents.
   ① You can change the repeat interval setting in “Keyer Repeat Time.”
   in the CW-KEY SET menu. (See Basic manual section 4)

   –1 001
   ① You can change or reset the number in “Present
   Number” in the KEYER 001 menu. (See Basic manual section 4)

   EDIT/SET Touch to display the EDIT/SET screen.
Count up trigger
The count up trigger enables the serial number to be automatically increased after each complete serial number exchange is sent. (Default: M2)

Count up trigger icon
Present number counter

① is displayed on the Memory keyer set to the count up trigger.
① You can change the count up trigger setting in the KEYER 001 menu. (See Basic manual section 4)

Preset Memory keyer contents

<table>
<thead>
<tr>
<th>Memory keyer</th>
<th>Contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>M1</td>
<td>CQ TEST CQ TEST DE ICOM ICOM TEST</td>

</tbody>
</table>

①“001” is the CW contest number.
If you want to set the Count up trigger to different keyer, select other keyer in “Keyer memory edit menu (EDIT)” (See Basic manual section 4).

Using a USB keyboard or external keypad
You can send the preset contents without opening the KEYER screen. See Basic manual section 13).

Keyer memory edit menu (EDIT)
Edit the Memory keyer contents in the EDIT menu.
① You can use up to a total of 8 Memory keyers (M1 to M8), and you can enter up to 70 characters in each memory.

Editing
(Example: Entering “QSL TU DE JA3YUA TEST” to M3)

1. Display the KEYER MEMORY screen in the CW mode.

2. Touch “CFM TU” for 1 second.

3. Touch “Edit.”

4. Touch [CLR] on the Keyer Memory keyboard until the preset contents are cleared.

(Continued on the next page)
2. ADVANCED OPERATIONS

Operating CW (ADVANCED) (Continued)

Keyer memory edit menu (EDIT) (Continued)

5. Enter “QSL TU DE JA3YUA TEST,” and then touch [ENT] to save.

6. To close the KEYER MEMORY screen, push [EXIT] several times.

Contest number menu (001 SET)

You can set the number style, count up trigger and preset number.

Setting

1. Display the KEYER 001 menu in the CW mode.

```
MENU > KEYER > EDIT/SET > 001 SET
```

2. Select the setting item.
   (Example: Number Style)

3. Select the setting option.

   • Returns to the KEYER 001 menu.

4. To close the “Number Style” screen, push [EXIT] several times.

TIP: How to reset to the default setting

Touching the item or its option for 1 second displays the Quick menu, and then touch "Default" to reset to the default setting.

Selectable characters

| Alphabet | | |
|----------| | |
| Symbols  | | |
| Numbers  | | |

About the symbols

• Enter "^" to send a string of characters with no intercharacter space. Put "^" before a text string such as "AR", and the string "ar" is sent with no space.
• Enter "*" (asterisk) to insert the CW contest number. The number automatically advances by 1. You can use this for only 1 Memory keyer at a time. "*" is used in Memory keyer M2 by default.
2. ADVANCED OPERATIONS

Keyer set menu (CW-KEY SET)

In this menu, you can set the memory keyer repeat time, dash weight, paddle specifications, key type, and so on.

Setting example
1. Display the CW-KEY SET menu in the CW mode.
   
   MENU » KEYER > EDIT/SET > CW-KEY SET

2. Select the setting item.
   (Example: Side Tone Level)
   
   Side Tone Level
   Side Tone Level Limit
   Keyer Repeat Time
   Dot/Dash Ratio
   
3. Adjust the Side Tone Level.
   (Example: 80%)
   
   Side Tone Level
   Side Tone Level Limit
   Keyer Repeat Time
   Dot/Dash Ratio
   
4. To close the CW-KEY SET screen, push **EXIT** several times.

Dot/Dash Ratio  (Default: 1:1:3.0)
Set the dot/dash ratio.
• Set to between 1:1:2.8 ~ 1:1:4.5 in 0.1 steps.

Keyweight example: Morse code “K”

Rise Time  (Default: 4ms)
Set the rise time of the transmitted CW envelope.
• Set to 2, 4, 6 or 8 milliseconds.

Paddle Polarity  (Default: Normal)
Set the paddle dot-dash polarity to Normal or Reverse.
  • Normal: Right = dash, Left = dot
  • Reverse: Right = dot, Left = dash

Key Type  (Default: ELEC-KEY)
Set the key type for the [KEY] connector on the rear panel.
• Set to Straight, Bug or Paddle.

MIC Up/Down Keyer  (Default: OFF)
Set the microphone [UP]/[DN] keys to use as a CW key.
• ON: Use the [UP]/[DN] keys as a CW key.
• OFF: Do not use the [UP]/[DN] keys as a CW key.

tips: How to reset to the default setting
Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.
Operating RTTY (FSK)

The IC-7610 has a built-in RTTY decoder and encoder. Using a USB keyboard and the contents set in the RTTY TX memory, you can do basic RTTY operations without using an external device or software.

If you are using PSK software, refer to the software manual.

2. ADVANCED OPERATIONS

Operating RTTY (FSK) (Continued)

Diamond Displaying the RTTY DECODE screen
With the built-in demodulator and decoder, received RTTY signals are displayed on the RTTY DECODE screen.

The decode screen for the PSK mode differs slightly from that of the RTTY mode.

MENU » DECODE

RTTY DECODE screen

Decoded characters
Transmitting
Selected band (MAIN)
Tuning indicator
FFT scope
RTTY memory title
Waterfall display

NOTE: "WAIT" appears next to the transmitting status indicator on the RTTY DECODE screen while buffering. If this appears, stop typing for a while and try transmitting again.

Diamond RTTY decoding
Rotate MAIN DIAL to tune a signal.

1 Information
- Aim for a symmetrical wave form, and be sure the peak points align with the mark (2125 Hz) and shift (170 Hz) frequency lines in the FFT scope.
- Tune to where both "◄" and "►" are displayed in the tuning indicator.
- The S-meter displays the received signal strength, when a signal is received.
- If you are receiving an RTTY signal but cannot decode correctly, try in the RTTY-R (reverse) mode.

RTTY mode Normal

170 Hz
Mark
2125 Hz

TIP: If you cannot receive, change the settings for "RTTY Mark Frequency" and "RTTY Shift Width."

MENU » SET > Function > RTTY Mark Frequency
MENU » SET > Function > RTTY Shift Width

Diamond Twin Peak Filter (TPF)
The Twin Peak Filter (TPF) changes the audio frequency response by boosting the mark and space frequencies for better reception of RTTY signals, or for decoding the AF output signal on a PC.

In the RTTY mode, push APF/TPF:
- The TPF function is turned ON, and the indicator on the key lights.

Pushing APF/TPF turns the Twin Peak Filter function ON or OFF.

NOTE: When you are using the Twin Peak Filter, the received audio output may increase. This is not a malfunction.
2. ADVANCED OPERATIONS

Operating RTTY (FSK) (Continued)

Diamond Transmitting an RTTY memory content
You can transmit the preset characters on the RTTY MEMORY screen.
1. You can edit the characters by touching [EDIT] on the RTTY MEMORY screen.
2. Display the RTTY DECODE screen in the RTTY mode.
   - The PSK mode screen differs slightly from the RTTY mode.
3. Touch [TX MEM].

MENU  » DECODE

To cancel the transmission and to return to the RTTY DECODE screen, push [EXIT].
After transmitting, automatically returns to receive.

When a keyboard is connected:
- You can transmit the preset contents in the RTTY memory (RT1 ~ RT8) by pushing [F1] ~ [F8] on the USB keyboard.
- After transmitting the contents, you can directly enter an RTTY message on the keyboard, and then push [F12] to transmit.
- To return to receive, push [F12] again.
- If the Auto TX/RX function is set to “OFF” or “AUTO RX” (p. 20), you can display the preset contents on the RTTY DECODE screen, and then transmit it by pushing [F12] on the keyboard.
- You can transmit the preset contents in the RTTY memory (RT1 ~ RT8) from an external device by setting the “External Keypad,” and then connecting an external keypad to [MIC] or [EXT KEYPAD] on the IC-7610.

MENU  » SET > Connectors > External Keypad
### Setting the RTTY Automatic TX/RX

You can set to automatically transmit the RTTY memory contents, or to automatically return to receive after transmitting each memory (RT1 ~ RT8).

<table>
<thead>
<tr>
<th>Selection</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>The selected memory contents are displayed on the RTTY DECODE screen. Push [F12] on the keyboard to transmit the selected memory, and push [F12] again to return to receive.</td>
</tr>
<tr>
<td>AUTO TX/RX</td>
<td>Automatically transmits the selected memory and returns to receive.</td>
</tr>
<tr>
<td>AUTO TX</td>
<td>Automatically transmits the selected memory, and then returns to receive by pushing [F12] on the keyboard.</td>
</tr>
<tr>
<td>AUTO RX</td>
<td>The selected memory contents are displayed on the RTTY DECODE screen. Push [F12] on the keyboard to transmit the selected memory, and then it automatically returns to receive after transmission.</td>
</tr>
</tbody>
</table>

1. Display the RTTY DECODE screen.

   - Touch [TX MEM].

2. Touch [EDIT].

3. Touch the setting memory’s option. (Example: RT1’s AUTO TX/RX)

4. Touch to select an option. (Example: AUTO TX)

5. Touch to select an option. (Example: AUTO TX/RX)

6. To exit the RTTY DECODE screen, push several times.
2. ADVANCED OPERATIONS

Operating RTTY (FSK) (Continued)

Topic: Editing an RTTY memory

You can edit the characters in the RTTY memories. You can save and transmit 8 RTTY memories for often-used RTTY messages. Each RTTY memory can contain up to 70 characters.

1. Display the RTTY MEMORY editing screen.
2. Touch the memory to edit the content.
   (Example: RT2)

   You can also push [QUICK], and then touch "Edit Memory Content."

3. To clear a character, touch [←] or [→] to move the cursor, then touch [CLR].
4. Enter the new characters, and then touch [ENT] to save.
5. To exit the RTTY DECODE screen, push [EXIT] several times.
2. ADVANCED OPERATIONS

Operating RTTY (FSK) (Continued)

Turning ON the RTTY log
Turn ON the RTTY log to save your TX and RX RTTY operating record onto an SD card.

1. You can select the data format type in the “Log Set” item on the RTTY DECODE LOG screen.
2. The log is saved even while “HOLD” is ON.

1. Display the RTTY DECODE LOG screen.
   MENU » DECODE > <MENU1> > LOG

2. Touch “Decode Log.”

3. Select “ON.”

4. Push EXIT.
   - “●” is displayed on the RTTY DECODE screen while the RTTY log is ON.

5. To turn OFF the RTTY log, select “OFF” in step 3.

Log Set > File Type (Default: Text)
Set the file type to save a log onto an SD card to “Text” or “HTML.”

You cannot change the file type while logging.

TIP: How to reset to the default setting
Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.
2. ADVANCED OPERATIONS

Operating RTTY (FSK) (Continued)

◊ Viewing the RTTY log contents
You can view the saved RTTY log contents.

1. Insert the SD card that the RTTY log is saved.
2. Display the RTTY DECODE LOG VIEW screen.
   MENU » DECODE > <MENU1> > LOG VIEW
3. Touch the log file to view.
   ○ The file with “●” is logging. You cannot view this log’s contents.
4. To exit the RTTY DECODE LOG VIEW screen, push EXIT several times.

Checking the file information and deleting a file
1. Touch the log file that you want to view or delete for 1 second.
2. Select an item from “File Information,” “Delete” and “Delete All.”
   • File Information: Displays the file name, size and logged date.
   • Delete: Deletes the selected log file.
   • Delete All: Deletes all log files.

◊ RTTY Decode Log set
This mode is for the log file type, time stamp setting, and other RTTY settings.

1. Display the RTTY DECODE SET screen.
   MENU » DECODE > <MENU1> > SET
2. Select an item to set.
   (Example: FFT Scope Averaging)

   1. Touch the log file that you want to view or delete for 1 second.
   2. Select a setting option.
      (Example: 2)
      ○ See the next page for details on the setting items and their options.
   3. To exit the RTTY DECODE SET screen, push EXIT several times.

TIP: How to reset to the default setting
Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.
2. ADVANCED OPERATIONS

Operating RTTY (FSK) (Continued)

- **RTTY Decode log set (Continued)**

  - **FFT Scope Averaging** (Default: OFF)
    Set the FFT scope waveform averaging function to between 2 and 4, or to OFF.
    - Use the default or a smaller FFT scope waveform number for tuning.

  - **FFT Scope Waveform Color** (Default: R: 51, G: 153, B: 255)
    Set the color of the FFT scope waveform.
    - Touch and select the R (Red), G (Green) or B (Blue) scale, and then rotate MULTI to adjust the ratio to between 0 and 255.
    - The color is displayed in the box above the RGB scale.

  - **Decode USOS** (Default: ON)
    Turn the letter code decoding capability ON or OFF after receiving a “space.”
    - USOS stands for UnShift On Space function.
    - ON: Decodes as a letter code.
    - OFF: Decodes as a character code.

  - **Decode New Line Code** (Default: CR, LF, CR+LF)
    Select the internal RTTY decoder new line code.
    - CR,LF,CR+LF: Makes a new line with any codes.
    - CR+LF: Makes a new line with only CR+LF code.

  - **Diddle** (Default: BLANK)
    Select the diddle status code.
    While transmitting in the RTTY mode, the selected code is transmitted when there is no code to transmit.
    - OFF: Turns OFF the Diddle function.
    - BLANK: Transmits blank codes.
    - LTRS: Transmits letter codes.

  - **TX USOS** (Default: ON)
    Explicitly inserts the FIGS character, even though it is not required by the receiving station.
    - ON: Inserts FIGS
    - OFF: Does not insert FIGS

  - **Auto CR+LF by TX** (Default: ON)
    Selects whether or not to automatically send a new line code (CR+LF) when transmitting.
    - ON: Transmits a CR+LF code.
    - OFF: Does not transmit the CR+LF code.

- **Time Stamp** (Default: ON)
  Select whether or not to display the time stamp (date, transmission time and reception time) on the RTTY DECODE screen and add it in the log.
  - OFF: Does not display or add the time stamp.
  - ON: Displays and adds the time stamp in the log.

- **Time Stamp (Time)** (Default: Local)
  Select whether or not to display the log on the RTTY DECODE screen and to save it, with the local time or with the UTC time when “Time Stamp” is ON.
  - Local: Displays and saves in the local time.
  - UTC: Displays and saves in the UTC.

- **Time Stamp (Frequency)** (Default: ON)
  Select whether or not to display the frequency information on the RTTY DECODE screen and to save it as a log when “Time Stamp” is ON.
  - OFF: Does not display or save as a log.
  - ON: Displays and saves as a log.

- **Font Color (Receive)** (Default: R: 128, G: 255, B: 128)
  Font Color (Transmit)** (Default: R: 255, G: 106, B: 106)
  Font Color (Time Stamp)** (Default: R: 0, G: 155, B: 189)
  Font Color (TX Buffer)** (Default: R: 255, G: 255, B: 255)
  Set the text font color for receive, transmit and time stamp characters.
  - Touch and select the R (Red), G (Green) or B (Blue) scale, and then rotate MULTI to adjust the ratio to between 0 and 255.
  - The color is displayed in the box above the RGB scale.
Operating PSK

A PSK encoder/decoder is built into the IC-7610. You can connect a USB keyboard to the transceiver and operate PSK without a PC. If you would rather use your PSK software, refer to its manual.

Displaying the PSK DECODE screen

With the built-in demodulator and decoder, received PSK signals are displayed on the PSK DECODE screen. The decode screen for the PSK mode slightly differs from that of the RTTY mode.

PSK DECODE screen

Decoded characters

Transmitting contents

(Example: PT1)

NOTE: “WAIT” appears next to the transmitting status indicator on the PSK DECODE screen while buffering. If this appears, stop typing for a while and try transmitting again.

Vector tuning indicator

The Vector tuning indicator is displayed when tuning PSK signals by rotating MAIN DIAL.

Indication example

- Tuned BPSK signal
- Tuned QPSK signal
- BPSK/QPSK idle signal
- Unmodulated signal

Function | Action
---|---
<MENU1> <MENU2> | Selects the Function menus.
HOLD/CLR | Touch
Clears the displayed characters.
Touch
1 sec. | Turns the Hold function ON or OFF. • “HOLD” is displayed and the current screen freezes.

AFC/NET | Touch
Toggles between AFC (AFC:ON), AFC/NET (AFC/NET: ON) or OFF.
Touch
1 sec. | Adds the offset frequency to the operating frequency.

TX MEM | Displays the PSK MEMORY screen.
ADJ | Enters the threshold level adjustment mode.
DEF | Touch
Sets the threshold levels to their defaults. • This key is displayed after touching [ADJ].
Touch
1 sec.
MAIN/SUB | Toggles between the Main and Sub bands.
B/QPSK | Toggles between the BPSK and QPSK modes.
31/63 | Toggles between the BPSK31 and BPSK63 modes.
LOG | Displays the PSK DECODE LOG set screen.
• Starts/ Stops saving a log file, or sets the file type.
LOG VIEW | Displays the PSK DECODE LOG VIEW screen.
• You can view the saved log contents.
SET | Displays the PSK DECODE SET screen.
Operating PSK (Continued)

◊ PSK decoding
You can fine tune the PSK signal using the Vector tuning indicator and waterfall display.

• When a PSK signal is received, the vertical line appears on the waterfall display.
• Tune the vertical line to the center of the waterfall display.
• The signal is properly tuned when the radiated lines in the vector tuning indicator narrow, as shown on the previous page.

If the two or more signals are in the band, slowly rotate (MAIN DIAL) to tune the displayed signal to the 1500 Hz tone.

You can change the PSK tone frequency for receiving, in the following item.

MENU > SET > Function > PSK Tone Frequency

About the QPSK mode operation
The QPSK (Quadrature Phase Shift Keying) mode has error correction capability to provide better decoding than the BPSK mode in marginal conditions. However, more accurate tuning is required, due to the tight phase margin of QPSK.

If the received signal is not properly demodulated, try selecting the PSK-R mode.
• In the QPSK mode, the phase shift direction must be the same on both the transmit and receive sides.
• To receive the reverse direction signal, select the PSK-R mode to match the phase shift direction to the transmit side.

◊ AFC/NET function
The IC-7610 has an AFC (Auto Frequency Control) function which automatically tunes the PSK signal. It also has a NET function that transmits the PSK signal tuned using the AFC function.

1. Display the PSK DECODE screen.

MENU > DECODE

2. Touch [AFC/NET].
• Touching this key toggles between AFC (AFC:ON), AFC/NET (AFC/NET: ON) or OFF (no icon).
• While the offset between the operating frequency and the PSK signal is displayed, touching [AFC/NET] for 1 second adds the offset frequency to the operating frequency.

NOTE:
• The AFC function may not tune the signal properly when a weak PSK signal is received.
• The AFC tuning range is set to ±15 Hz by default. You can select set to ±8 Hz in the following item.

MENU > DECODE > <MENU2> > SET > AFC Range
Transmitting a PSK memory content

You can transmit the preset characters on the PSK MEMORY screen.

1. Display the PSK DECODE screen in the PSK mode.

2. Touch [TX MEM].

3. Touch an PSK memory between [PT1] and [PT8] to transmit.

(Example: PT1)

- The TX status indicator lights red and the Po meter swings.
- To cancel the transmission and to return to the PSK DECODE screen, push [EXIT].
- After transmitting, automatically returns to receive.

When a keyboard is connected:

- You can transmit the preset contents in the PSK memory (PT1 ~ PT8) by pushing [F1] ~ [F8] on the USB keyboard. After transmitting the preset contents, you can directly enter a PSK message on the keyboard, and then push [F12] to transmit. To return to receive, push [F12] again.
- If the Auto TX/RX function is set to "OFF" or "AUTO RX" (p. 28), you can display the preset contents on the PSK DECODE screen, and then transmit it by pushing [F12] on the keyboard.
- You can transmit the preset contents in the PSK memory (PT1 ~ PT8) from an external device by setting the "External Keypad," and then connecting an external keypad to [MIC] or [EXT KEYPAD] on the IC-7610.
2. ADVANCED OPERATIONS

Operating PSK (Continued)

Setting the PSK Automatic TX/RX
You can set to automatically transmit the PSK memory contents or to automatically return to receive after transmitting for each memory (PT1 ~ PT8).

<table>
<thead>
<tr>
<th>Selection</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>The selected memory contents are displayed on the PSK DECODE screen. Push [F12] on the keyboard to transmit the selected memory and push [F12] again to return to receive.</td>
</tr>
<tr>
<td>AUTO TX/RX</td>
<td>Automatically transmits the selected memory and returns to receive.</td>
</tr>
<tr>
<td>AUTO TX</td>
<td>Automatically transmits the selected memory, and then returns to receive by pushing [F12] on the keyboard.</td>
</tr>
<tr>
<td>AUTO RX</td>
<td>The selected memory contents are displayed on the PSK DECODE screen. Push [F12] on the keyboard to transmit the selected memory, and then it automatically returns to receive after transmitting.</td>
</tr>
</tbody>
</table>

1. Display the PSK DECODE screen.

   MENU » DECODE

The PSK mode screen slightly differs from the RTTY mode.

2. Touch [TX MEM].

3. Touch [EDIT].

4. Touch the setting memory’s option. (Example: PT1’s AUTO TX/RX)

5. Touch to select an option. (Example: AUTO TX)

6. To exit the PSK DECODE screen, push EXIT several times.
## 2. ADVANCED OPERATIONS

### Operating PSK (Continued)

#### Editing a PSK memory
You can edit the characters in the PSK memories. You can save and transmit 8 PSK memories for often-used RTTY messages. Each PSK memory contains up to 70 characters.

1. Display the PSK MEMORY editing screen.
   
   ```
   MENU » DECODE > TX MEM > EDIT
   ```

2. Touch the editing memory content.
   (Example: PT2)

   ① You can also push “QUICK”, and then touch “Edit Memory Content.”

3. To clear a character, touch `[←]` or `[→]` to move the cursor, then touch [CLR].

4. Enter the new characters, and then touch [ENT] to save.

5. To exit the PSK DECODE screen, push [EXIT] several times.
2. ADVANCED OPERATIONS

Operating PSK (Continued)

◊ Turning ON the PSK log

Turn ON the PSK decode log to save your TX and RX PSK operating record onto an SD card.

1. You can select the data format type in the “Log Set” item on the PSK DECODE LOG screen.
2. The log is saved even while “HOLD” is ON.

1. Display the PSK DECODE LOG screen.

   - **MENU > DECODE > <MENU2> > LOG**

2. Touch “Decode Log.”

3. Select “ON.”

4. Push **EXIT**.
   - “●” is displayed on the PSK DECODE screen while the PSK log is ON.

5. To turn OFF the PSK log, select “OFF” in step 3.

Log Set > File Type (Default: Text)

Set the file type to save a log onto an SD card to “Text” or “HTML.”

1. You cannot change the file type while logging.

TIP: How to reset to the default setting

Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.
2. ADVANCED OPERATIONS

Operating PSK (Continued)

◊ Viewing the PSK log contents
You can view the saved PSK log contents.

1. Insert the SD card that the PSK log is saved.
2. Display the PSK DECODE LOG VIEW screen.

   MENU » DECODE > <MENU1> > LOG VIEW

3. Touch the log file to view.
   ① The file with “●” is logging. You cannot view this log’s contents.

4. To exit the PSK DECODE LOG VIEW screen, push EXIT several times.

Checking the file information and deleting a file
1. Touch the log file that you want to check or delete for 1 second.
2. Select an item from “File Information,” “Delete” and “Delete All.”
   • File Information: Displays the file name, size and logged date.
   • Delete: Deletes the selected log file.
   • Delete All: Deletes all log files.

◊ PSK Decode Log set
This mode is for the log file type, time stamp setting, and other PSK settings.

1. Display the PSK DECODE SET screen.

   MENU » DECODE > <MENU1> > SET

2. Select an item to set.
   (Example: FFT Scope Averaging)

3. Select a setting option.
   (Example: 2)
   ① See the next page for details on the setting items and their options.

4. To exit the PSK DECODE SET screen, push EXIT several times.

TIP: How to reset to the default setting
Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.
2. ADVANCED OPERATIONS

Operating PSK (Continued)

◇ PSK Decode log set (Continued)

**FFT Scope Averaging** (Default: OFF)
Set the FFT scope waveform averaging function to between 2 and 4, or to OFF.
① Use the default or smaller FFT scope waveform number for tuning.

**FFT Scope Waveform Color**
(Default: R: 51, G: 153, B: 255)
Set the color of the FFT scope waveform.
① Touch and select the R (Red), G (Green) or B (Blue) scale, and then rotate \( \text{MULTI} \) to adjust the ratio to between 0 and 255.
① The color is displayed in the box above the RGB scale.

**AFC Range**
(Default: ±15 Hz)
Selects the AFC (Automatic Frequency Control) function’s operating range from ±15 Hz and ±8 Hz.
① The AFC function may not tune the signal properly when a weak PSK signal is received.

**Time Stamp**
(Default: ON)
Select whether or not to display the time stamp (date, transmit and receive time) on the PSK DECODE screen, and add it in the log.
• OFF: Does not display or add the time stamp.
• ON: Displays and adds the time stamp in the log.

**Time Stamp (Time)**
(Default: Local)
Select whether or not to display the log on the PSK DECODE screen and to save it, with the local time or with the UTC time when “Time Stamp” is ON.
• Local: Displays and saves in the local time.
• UTC: Displays and saves in UTC time.

**Time Stamp (Frequency)**
(Default: ON)
Select whether or not to display the frequency information on the PSK DECODE screen and to save it as a log when “Time Stamp” is ON.
• OFF: Does not display or save as a log.
• ON: Displays and saves as a log.

**Font Color (Receive)**
(Default: R: 128, G: 255, B: 128)
**Font Color (Transmit)**
(Default: R: 255, G: 106, B: 106)
**Font Color (Time Stamp)**
(Default: R: 0, G: 155, B: 189)
**Font Color (TX Buffer)**
(Default: R: 255, G: 255, B: 255)
Set the text font color for received, transmitting, time stamp characters.
① Touch and select the R (Red), G (Green) or B (Blue) scale, and then rotate \( \text{MULTI} \) to adjust the ratio to between 0 and 255.
① The color is displayed in the box above the RGB scale.
2. ADVANCED OPERATIONS

FM repeater operation

A repeater receives your radio’s signals and simultaneously retransmits them on a different frequency to provide a greater communication range. When using a repeater, the transmit frequency shifts from the receive frequency by an offset amount. You can access a repeater using the split function.

1. Set the operating frequency in the FM mode.
   (Example: 29.650.00 MHz)

   • Turns ON the Quick Split function.
   • Turns the Tone function ON and “TONE” is displayed.
   • The TX indicator and the repeater’s receive frequency are displayed on the Sub band.

- You can set the frequency offset for the HF band.
  MENU » SET > Function > SPLIT > FM SPLIT Offset (HF)

- You can set the frequency offset for the 50 MHz.
  MENU » SET > Function > SPLIT > FM SPLIT Offset (50M)

Setting the repeater tone frequency

Some repeaters require a subaudible tone in order to be accessed. Subaudible tones are superimposed on your signal, and must be set first.

Do the following steps to set the tone frequency.

1. Select the FM mode.
2. Touch [TONE] for 1 second.

3. Rotate [MAIN DIAL] to select the subaudible tone frequency.

   Resets the tone frequency to the default.

- Selectable tone frequencies

(Continued on the next page)
2. ADVANCED OPERATIONS

FM repeater operation (Continued)

◇ Setting the repeater tone frequency (Continued)

Checking the repeater tone frequency
You can check the tone frequency by receiving the repeater’s input frequency using the tone scan. To receive the input signals, the transceiver detects the subaudible tone frequency using the tone scan function.

1. Touch [T-SCAN].
   • The scan starts, and then stops when a matching tone frequency the same as the repeater is received.

   ![TONE FREQUENCY Screen](image)

   Blinks while scanning

2. To close the TONE FREQUENCY screen, push [EXIT].

   ![Quick Split function ON](image)

   Another station’s transmit frequency

Chapter the repeater input signal
You can check whether you can directly receive another station’s transmit signal or not, by listening to the repeater input frequency.

① While receiving, hold down XFC to listen the repeater input frequency.
① While listening, the TX/RX indicator lights green, and then the Noise Reduction and Notch Filter settings are cancelled.
2. ADVANCED OPERATIONS

Tone squelch operation

The Tone squelch opens only when you receive a signal that includes a matching subaudible tone in the FM mode. You can silently wait for calls from other stations using the same tone. When you transmit, the tone frequency is superimposed on your own signal.

1. Set the operating frequency in the FM mode.
   (Example: 29.550.00 MHz)
2. Touch [TONE] several times to select “TSQL.”
   • Touching [TONE] changes between “TONE,” “TSQL” and “OFF.”
3. Touch [TONE] for 1 second.
4. Rotate [MAIN DIAL] to select the tone frequency.
   • Touch for 1 second to reset to the default.

- Selectable tone frequencies

Checking another station's tone frequency

You can check another station’s tone frequency by tone scanning while the station is transmitting.

1. Touch [T-SCAN].
   • The scan starts, and then stops when the tone frequency as another station is received.
2. To close the TONE FREQUENCY screen, push [EXIT].

Blinks while scanning
2. ADVANCED OPERATIONS

Data mode (AFSK) operation

You can operate in a data mode using AFSK (Audio Frequency Shift Keying).

1. Connect a PC or other device to the transceiver.
2. Set the operating band and data operating mode.
   (Example: 50 MHz band, FM-D1)
3. Refer to your application software manual for setting and communication details.
   (Example: 50 MHz band, FSK31 or JT65 with a PC application software, refer to the software's instruction manual.)

TIP: The carrier point is displayed when operating AFSK in the SSB data mode. See the illustration below for a tone-pair example in the LSB mode.

Transverter operation

You can use the Transverter function as an exciter for a transverter.

**Transverter setting example**

This is an example of operating a 144 MHz band transverter using the IC-7610’s 50 MHz band.

1. Connect the 144 MHz band transverter’s RF output to [X-VERTER].
2. Set the operating band and mode.
   (Example: 50 MHz band (MAIN), SSB)
3. Rotate (MAIN DIAL) to set the frequency.
   (Example: 50.000.00)
4. Turn ON the “Transverter function” in the following item (Example: 94 MHz).

5. Set the “Transverter Offset” in the following item.

   - The offset frequency (94.000) set in this item is added to the operating frequency (50.000.00) to operate the 144 MHz band transverter.
   - The first digit “1” is not displayed. Therefore, 144 MHz is displayed as “44.000.000.”

6. Push (EXIT) several times to close the SET screen.

7. Rotate (MAIN DIAL) to set the frequency.
2. ADVANCED OPERATIONS

About the 5 MHz frequency band operation (USA version only)

Operation on the 5 MHz frequency band is allowed on 5 discrete frequencies and you must adhere to the following:

- The USB, USB Data, PSK, and CW modes.
- Maximum of 100 watts ERP (Effective Radiated Power)
- Maximum 2.8 kHz bandwidth

It is your responsibility to set all controls so that transmission in this frequency band meets the stringent conditions under which amateur operations may use these frequencies.

**TIP:** We recommend that you save these frequencies, modes and filter settings into memory channels, for easy recall.

**NOTE:** To assist you in operating within the rules specified by the FCC, transmission is illegal on any frequencies other than the five shown in the tables below.

For the USB and USB data modes:
The FCC specifies center frequencies on the 5 MHz frequency band. However, the transceiver displays carrier frequency. Therefore, tune the transceiver to 1.5 kHz below the specified FCC channel center frequency.

<table>
<thead>
<tr>
<th>Transceiver displayed frequency</th>
<th>FCC channel center frequency</th>

3. ADVANCED SCOPE OPERATION

Spectrum Scope screen

Setting the Center Mode span
Displays signals around the operating frequency within the selected span. The operating frequency is always displayed in the center of the screen.

1. Display the SPECTRUM SCOPE screen.
   (MENU) » [SCOPE]

2. Touch [CENT/FIX] to select the Center mode.
   ① Touch [CENT/FIX] to toggle between the Center and Fixed modes.

3. Touch [SPAN] several times until the desired scope span is selected.
   • Selectable span: ±2.5, 5.0, 10, 25, 50, 100, 250 and 500 kHz

Example: Setting for ±2.5 kHz span

4. To close the SPECTRUM SCOPE screen, push [EXIT].

Setting the Fixed Mode range
Displays signals within a specified frequency range. The selected frequency band activity can easily be observed using this mode. Three Fixed Edge bands can be set for each amateur frequency band covered by the transceiver.

1. Display the SPECTRUM SCOPE screen.
   (MENU) » [SCOPE]

2. Touch [CENT/FIX] to select the Fixed mode.
   ① Touch [CENT/FIX] to toggle between the Center and Fixed modes.

3. Touch [EDGE] several times until the desired Fixed Edge frequency band is selected.
   ① The fixed Edge frequencies are settable (p. 41).

Example: Setting for ±2.5 kHz span

Example: 14,000 MHz
Example: 14.350 MHz
Example: 14.000 MHz
Example: 14.100 MHz

“>>” shows that the receive frequency is out of the fixed Edge frequency.

① When the operating frequency moves outside the upper or lower Edge frequency, “<<” or “>>” is displayed in the upper side corners of the SPECTRUM SCOPE screen.
   <<: The frequency is outside the lower edge.
   >>: The frequency is outside the higher edge.

① When the frequency moves further away, “Out of Range” is displayed.

4. To close the SPECTRUM SCOPE screen, push [EXIT].
3. ADVANCED SCOPE OPERATION

Spectrum Scope screen (Continued)

Directly selecting a frequency
By touching or clicking on the FFT scope zone or the waterfall zone on the SPECTRUM SCOPE screen, you can directly tune your frequency on the displayed area of the band.

1. Display the SPECTRUM SCOPE screen.

2. Touch the signal spectrum on the FFT scope zone or the waterfall zone or click on a signal.
   (Example: in the Center mode)

3. If you touch the FFT scope zone or the waterfall zone, the touched area is zoomed in.

   Touch the signal in the zoomed area.

   If you click on a signal, your frequency is tuned to the signal frequency.

   Your frequency is tuned to the signal frequency.

Information
- While right-clicking on the screen, the frequency where the cursor is located is displayed.
- By right-clicking and dragging the cursor, the frequency changes. Release to return to the originally selected frequency.
- By clicking and dragging with the cursor, the frequency changes to that where the cursor is released.

4. To exit the SPECTRUM SCOPE screen, push (EXIT).

Displaying the Dual Scope screen
The transceiver has a Dual scope mode that simultaneously displays the Main and Sub band scopes during Dualwatch operation.

1. Display the SPECTRUM SCOPE screen.

2. Touch [DUAL].
   - Touching [DUAL] toggles between Dual scope and Single scope.
   - The selected scope is framed in orange.
   - Touching or clicking the scope that is not framed in orange selects the Main band scope or Sub band scope.

3. You can select the scope display type in the Dual Scope Type item.

   Example: “Side by Side”
   - You can also set the Dual Scope Auto Select item not to change the operating band (Main/Sub) when the frequency is touched or clicked.

4. To exit the SPECTRUM SCOPE screen, push (EXIT).
3. ADVANCED SCOPE OPERATION

Spectrum Scope screen (Continued)

◇ Adjusting the sweep speed
Select the sweep speed to change the FFT scope refresh speed and the waterfall speed.

To change only the waterfall speed, select “Slow,” “Mid,” or “Fast” in the Waterfall Speed.

1. Display the SPECTRUM SCOPE screen.

2. Touch [<MENU1>] to display Menu 2.

3. Touch [SPEED] several times until the desired sweep speed is selected.

• Selectable speeds: FAST, MID, or SLOW

“↑,” “↑↑,” “↑↑↑,” or “↑” indicates FAST, MID, or SLOW.

A popup window is displayed in the center of the SPECTRUM SCOPE screen and displays the selected sweep speed for 1 second.

4. To exit the SPECTRUM SCOPE screen, push [EXIT].

◇ Adjusting the Reference level
When monitoring a weak signal that is buried in the noise floor, or monitoring a strong signal but some stronger signals are nearby, adjusting the Reference level of the screen helps you to see these signals.

• Even if this setting is changed, it does not affect the input signal level.

• When you adjust the Reference level, the signal strength for the waterfall also appears to change.

1. Display the SPECTRUM SCOPE screen.

2. Touch [<MENU1>] to display the Menu 2.

3. Touch [REF].

4. Rotate [MAIN DIAL] to adjust the level.

• Adjustable range: –30.0 dB ~ +10.0 dB

① You can reset to ±0.0 dB by touching [DEF].

5. To exit the SPECTRUM SCOPE screen, push [EXIT].

Difference in the spectrum

① If you adjust this setting to a positive level, all signal levels appear stronger.

Or, if you adjust to a negative level, all signal levels appear weaker.
3. ADVANCED SCOPE OPERATION

SCOPE SET screen

This Set screen is used to set the waveform color, Scope range for the Fixed mode, and so on.

1. Display the SPECTRUM SCOPE screen.
2. Touch [EXPD/SET] for 1 second.
3. Rotate [MAIN DIAL] to scroll through the items, and then touch the item you want to set.
   (Example: Max Hold)
4. Touch an option to set.
   (See the column to the right for details on the items.)
5. To exit the SCOPE SET screen, push [EXIT].

TIP: How to reset to the default setting
Touching the item or its option for 1 second displays the Quick menu, and then touch "Default" to reset the item/option to its default setting.

Scope during Tx (CENTER TYPE) (Default: ON)
Set the TX signal display to ON or OFF.

Max Hold (Default: 10s Hold)
Select the peak level holding function.
- OFF: Turns OFF the peak level holding function.
- 10s Hold: Holds the peak spectrum for 10 seconds.
- ON: Continuously holds the peak spectrum.

CENTER Type Display (Default: Filter Center)
Select the center frequency of the SPECTRUM SCOPE screen. (Only in the Center mode)
- Filter Center: Displays the selected filter’s center frequency in the center of the SPECTRUM SCOPE screen.
- Carrier Point Center:
  - Displays the carrier point frequency of the selected operating mode in the center of the SPECTRUM SCOPE screen.
- Carrier Point Center (Abs. Freq.):
  - In addition to the carrier point center setting above, the actual frequency is displayed at the bottom of the scope.

Marker Position (Fix Type) (Default: Carrier Point)
Select the marker position on the SPECTRUM SCOPE screen. (Only in the Fixed mode)
- Filter Center: Displays the Marker on the selected filter’s center frequency.
- Carrier Point: Displays the Marker on the carrier point frequency of the selected operating mode.

Averaging (Default: OFF)
Set the FFT scope waveform averaging function to between 2 and 4, or OFF.
- OFF: The FFT scope screen refreshes on each sweep time. This setting displays the critical spectrum view.
- 2, 3, 4: The FFT scope screen averages 2 to 4 sweeps to smoothly display the spectrum.

Waveform Type (Default: Fill)
Select the outline waveform display for the FFT scope screen.
- Fill: The waveform is drawn only in color.
- Fill+Line: The waveform is drawn in color with an outline.
3. ADVANCED SCOPE OPERATION

SCOPE SET screen (Continued)

Waveform Color (Current)  
(Default: (R) 217 (G) 241 (B) 247)
Set the waveform color for the currently received signals.
  ① Touch and select the R (Red), G (Green) or B (Blue) scale, and then rotate MULTI to adjust the level from 0 to 255.
  ① The color is displayed in the box above the RGB scale.

Waveform Color (Line)  (Default: (R) 70 (G) 30 (B) 0)
Set the waveform outline color for the currently received signals.
  ① Touch and select the R (Red), G (Green) or B (Blue) scale, and then rotate MULTI to adjust the level from 0 to 255.
  ① The color is displayed in the box above the RGB scale.

Waveform Color (Max Hold)  
(Default: (R) 58 (G) 110 (B) 147)
Set the waveform color for the received signals maximum level.
  ① Touch and select the R (Red), G (Green) or B (Blue) scale, and then rotate MULTI to adjust the level from 0 to 255.
  ① The color is displayed in the box above the RGB scale.

Waterfall Display  (Default: ON)
Turn the Waterfall display ON or OFF for the normal scope or Mini scope screens.
  ① On the Expanded scope screen, the Waterfall is always displayed.
  • OFF: Turns OFF the Waterfall display.
  • ON: Turns ON the Waterfall display.

Waterfall Peak Color Level  (Default: Grid 10)
Select the signal level that the Waterfall displays a peak color.
Higher signal levels are Red, Yellow, Green, Light-blue, Blue and Black, in that order.
  • Selection: Grid 1 ~ Grid 10

Waterfall Marker Auto-hide  (Default: ON)
Set the Waterfall Marker Auto-hide function to ON or OFF.
  • OFF: The marker in the Waterfall zone stays ON.
  • ON: The marker in the Waterfall zone is hidden 2 seconds after it stops in place.

Dual Scope Type  (Default: Over/Under)
When the Dual scope is selected, select the Main and Sub scope layout.
  • Over/Under: Displays the Main scope over the Sub scope.
  • Side by Side: Displays the Main and Sub scopes side by side.

Dual Scope Auto Select  (Default: ON)
When the Dual scope is selected, by selecting the band (MAIN or SUB) simultaneously switches the Main or Sub scope.
  • OFF: The Main scope and Sub scope are not switched by selecting the Main band or Sub band.
  • ON: The Main scope and Sub scope are switched by selecting the Main band or Sub band.

Continued on the next page
3. ADVANCED SCOPE OPERATION

SCOPE SET screen (Continued)

Fixed Edges

0.03 – 1.60  
(Default: No.1 0.500–1.500 MHz)  
(Default: No.2 0.500–1.500 MHz)  
(Default: No.3 0.500–1.500 MHz)

Set the Upper and Lower Edge frequencies for the Fixed mode. Three edges are assigned to each band.

- Settable range: 0.030 ~ 1.600 MHz

1.60 – 2.00  
(Default: No.1 1.800–2.000 MHz)  
(Default: No.2 1.800–1.830 MHz)  
(Default: No.3 1.900–1.930 MHz)

- Settable range: 26.000 ~ 30.000 MHz

30.00 – 45.00  
(Default: No.1 30.000–31.000 MHz)  
(Default: No.2 30.000–31.000 MHz)  
(Default: No.3 30.000–31.000 MHz)

- Settable range: 30.000 ~ 45.000 MHz

45.00 – 60.00  
(Default: No.1 50.000–51.000 MHz)  
(Default: No.2 50.000–50.100 MHz)  
(Default: No.3 50.100–50.300 MHz)

- Settable range: 45.000 ~ 60.000 MHz

Touch \(\uparrow\) \(\downarrow\) to select the upper and lower edge frequency, and then rotate \(\text{MULTI}\) or touch the key pad to edit the frequency.
4. VOICE RECORDER FUNCTIONS

Recording a QSO audio

This transceiver is equipped with a QSO recorder not only for the receive audio, but also for the transmit audio.

This function is useful to make a QSO record or to confirm your QSO with a rare entity’s station or on a DX'pedition. You can also use the function to repeatedly send the same message.

The recorded contents are saved onto an SD card.

There are 3 ways to start recording.

• Hold down [REC] for 1 second.
• Push [QUICK] and select “REC Start.”
• Push [MENU] and touch [RECORD].

The recorded audio is saved in the “Voice” folder on the SD card.

Using the [REC] key

• Hold down [REC] for 1 second to start recording.
• To stop recording, hold down [REC] for 1 second again.
• You can change the recorder settings on the RECORDER SET screen (p. 47).

Using the [QUICK] key

1. Push [QUICK].
2. Touch [<<REC Start>>] to start recording.

Using the MENU screen

1. Display the QSO RECORDER screen.
2. Touch “<<REC Start>>” to start recording.

When the PTT Automatic Recording function, “PTT Auto REC” is set to ON in RECORDER SET, the recording automatically starts when you start transmitting.

TIP: About the icons

• While recording, “●” is displayed under the clock readout and the SD card indicator next to the SD card slot blinks blue.
• While pausing, “II” is displayed.

NOTE:
• To record a QSO, an SD card (user supplied) is required.
• If your SD card does not have an “IC-7610” folder, back up any data on the SD card, insert it in the transceivers card slot and then format it using the built-in format function.
• Once the recording starts, recording will restart after the transceiver is turned OFF and ON again.
• The recording continues until you touch <<REC Stop>> or the free space on the SD card has run out.
• When the recording file’s content becomes 2 GB, the transceiver continues to record, but to a new file.
4. VOICE RECORDER FUNCTIONS

Playing back a QSO audio

You can playback the recorded QSO audio.

1. Insert the SD card in which the recorded audio is saved.
2. Display the PLAY FILES screen.
3. Select the folder that the file you want to playback is saved.
4. Select the file to play back.
   • Starts a playback.
5. To close the PLAY FILES screen, push EXIT several times.

![Playback screen](image)

- Operating frequency, operating mode, of the Main and Sub bands.
- The TX/RX status of the recorded audio.
- Recording start time and date
- The number of file
- Play back icon
- Play back time
- Total time
- Play back process
- Play the previous file
- Pause/Playback
- Play the next file
- Rewind
- Forward
Playing back a recorded audio on a PC

You can also playback the voice memory data on a PC.

1. Insert the SD card into your PC.
2. Open the “Voice” folder.
3. Open the folder where the file you want to playback is saved.
4. Double-click file that you want to play back.

You can also playback the voice memory data on a PC.

The recorded information (frequency, date, and so on) is not displayed.

• The operations while playing back may differ, depending on the application. Refer to the application’s instruction manual for details.
• When the file does not playback, after double-clicking the file, download an appropriate software.

(Example: Windows Media® Player)

NOTE:

- The files are titled based on the date and time (yyyymmdd_hhmmss.wav).
  (Example: 20171001_120255.wav)
4. VOICE RECORDER FUNCTIONS

Checking the folder information and file information

You can check the folder name, size, and saved date or recorded file’s operating frequency, operating mode, date, and so on.

**Checking the folder information:**
1. Display the PLAY FILES screen. [MENU] » RECORD > Play Files
2. Touch a folder for 1 second.
3. Touch "Folder Information."
   • The FOLDER INFORMATION screen is displayed.
4. To close the PLAY FILES screen, push [EXIT] several times.

**Checking the file information:**
1. Display the PLAY FILES screen. [MENU] » RECORD > Play Files
2. Touch a folder.
3. Touch a file to check its information for 1 second.
   • The QUICK MENU is displayed.
4. Touch "File Information."
   • The FILE INFORMATION screen is displayed.
5. To close the PLAY FILES screen, push [EXIT] several times.
4. VOICE RECORDER FUNCTIONS

Deleting files

1. Display the PLAY FILES screen.
2. Select the folder that the file you want to delete is saved.
3. Touch the file that you want to delete for 1 second.
   • The QUICK MENU is displayed.
4. Touch “Delete.”
   ① If you want to delete all files in the selected folder, touch “Delete All.”
   • “Delete File?” is displayed.
5. Touch [YES].
   • The file is deleted and returns to the previous screen.
6. To close the PLAY FILES screen, push EXIT several times.

Deleting folders

1. Display the PLAY FILES screen.
2. Touch the folder you want to delete for 1 second.
   • The QUICK MENU is displayed.
3. Touch “Delete.”
   ① If you want to delete all folders, touch “Delete All Folders.”
   • “Delete Folder?” is displayed.
4. Touch [YES].
   • The folder is deleted and returns to the previous screen.
5. To close the PLAY FILES screen, push EXIT several times.
You can change the recorder settings on this screen.

**REC Mode** (Default: TX&RX)
Selects the recording mode to record a QSO audio.
- **TX&RX**: Records both the transmit and receive audio.
- **RX Only**: Records only the received audio.

**TX REC Audio** (Default: Direct)
Selects the recording audio to transmit.
- **Direct**: Records the microphone audio.
- **Monitor**: Records the TX monitor audio.

**RX REC Condition** (Default: Squelch Auto)
Selects the recording condition for receive.
- **Always**: Records even if no signal is received.
- **Squelch Auto**: Records only when the squelch opens.
  (The recording will be paused when the squelch closes while recording.)

**File Split** (Default: ON)
Turns the File Split function ON or OFF.
- **OFF**: The audio is continuously recorded into the file even if you switch between transmit and receive or the squelch status changes between open and closed.
  When the recording file’s size becomes 2 GB, the transceiver continues to record, but to a new file.
- **ON**: While recording, and if you switch between transmit and receive, or the squelch status changes between open and closed, a new file is automatically created in the same folder, and the audio is saved into the new one.

**PTT Auto REC** (Default: OFF)
Turns the PTT Automatic Recording function ON or OFF.
- **OFF**: The recording does not start, even if a signal is transmitted.
- **ON**: The recording automatically starts when a signal is transmitted.

The recording will stop when:
- 10 seconds has passed without transmission after the last transmission.
- 10 minutes has passed with no signal after the last transmission.
  - If you receive a signal within 10 seconds after the last transmission, the received audio is also recorded.
  - If you receive another signal within 10 seconds after the last reception, the received audio is also recorded.
- 10 minutes has past while operating with the squelch is open in the SSB, CW, RTTY, or AM mode.
- The frequency or operating mode is changed.
- The operating method (V/M, M-CH, Band Stacking Register, and so on) is changed.

**PRE-REC for PTT Auto REC** (Default: 10sec)
Selects whether or not record the audio that is received before the PTT Automatic Recording function is activated.
- **OFF**: Does not record the audio.
- 5sec/10sec/15sec: Records the audio that is previously received in this set period of time.

**TIP: How to reset to the default setting**
Touching the item or its option for 1 second displays the Quick menu, and then touch "Default" to reset to the default setting.
4. VOICE RECORDER FUNCTIONS

PLAYER SET screen

You can fast forward or rewind while playing back an audio file. You can change the skip time in the PLAYER SET screen.

1. Display the PLAYER SET screen.

   MENU » RECORD > Player Set

2. Touch “Skip Time.”

3. Touch an option. (Example: 5 seconds)

4. To close the PLAYER SET screen, push (EXIT).

TIP: How to reset to the default setting

Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.
4. VOICE RECORDER FUNCTIONS

INSTANT REPLAY SET screen

You can set the recording time and the playing back time for the Instant Replay function.

1. Display the INSTANT REPLAY SET screen.
   - MENU » RECORD > Instant Replay Set

2. Touch the setting item. (Example: REC Time)

3. Rotate MULTI to set the recording time.

REC Time
   (Default: 15sec)
   Set the recording time for the Instant Replay function between 5 ~ 30 seconds. The audio is saved in the built-in audio memory.

Play Time
   (Default: 5sec)
   Set the play back time for the Instant Replay function between 3 ~ 10 seconds.
   The Instant Replay function plays back the recorded audio in the built-in audio memory, from the last 5 seconds (default) from the time (REC) was pushed.

TIP: How to reset to the default setting
   Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.

Instant Replay function

Recording the Instant Replay
   The Instant Replay function records the previous 15 seconds (default) from the time when (REC) has been pushed. The audio is recorded into the built-in memory.
   - You can only record once, and the memory is overwritten by pushing (REC) again.

Playing back the Instant Replay
   After recording an audio using the Instant Replay function, you can play back the last 5 seconds (default) from the time (PLAY) was pushed.
   - While playing back, (PLAY) is displayed.

Playing back all the recorded memory
   After recording an audio using the Instant Replay function, you can also play back the entire memory from the top, by holding down (PLAY) for 1 second.
   - While playing back, (PLAY) is displayed.
5. VOICE TX MEMORY OPERATION

Recording a Voice TX memory

You can record up to 8 Voice transmit memories (T1 ~ T8) of up to one and a half minutes in each memory, onto an SD card. To transmit a recorded content using a Voice TX memory, first record the message, as described below.

1. A user supplied SD card is required to use the Voice TX memory function.
2. You can also transmit the recorded content using an external keypad.

Recording

1. Display the VOICE TX screen in the SSB, AM, or FM mode.
2. Touch [REC/SET].
3. Touch “REC.”
   • The VOICE TX RECORD screen is displayed.
4. Touch “=” of the TX memory.
   (Example: T1)
5. Touch and speak into the microphone without holding down [PTT] to start recording.

   Information
   • You can record up to one and a half minutes in each memory.
   • The previously recorded content is overwritten.
6. Touch to stop recording.
7. To close the VOICE TX screen, push several times.

Playing back

• On the selected memory’s recording screen, touch to start playing back without transmitting.
• To stop the playback, touch .

TIP: How to clear the recorded content
Touch the Voice memory for 1 second in step 4 to display the Quick menu, and then touch “Clear.”
5. VOICE TX MEMORY OPERATION

Entering a Voice TX memory name

You can assign a name to the recorded Voice memories.

1. Open the VOICE TX RECORD screen.
2. Touch the Voice TX memory to enter the name for 1 second.
   - The selected memory needs to contain a recording.
   - Opens the QUICK MENU screen.
3. Touch “Edit Name.”
   - Opens the Name editing screen.
4. Enter a name, and then touch [ENT] to save.
   - The editing screen closes and returns to the VOICE TX RECORD screen.
   - The entered name is displayed.
5. To close the VOICE TX RECORD screen, push EXIT.
   - The entered memory name is also displayed on the VOICE TX screen.
Transmitting a Voice memory content

You can transmit the Voice TX memory contents once, or repeatedly. This is useful for transmitting your call sign, contest number or name in some contests, or repeatedly calling CQ.

◊ Transmitting
Transmits the prerecorded contents. (p. 50)
1. Display the VOICE TX screen.
2. Touch the desired Voice TX memory key [T1] ~ [T8].
   • Transmits the recorded content once.
3. To close the VOICE TX screen, push EXIT.

When a keyboard or keypad is connected:

- You can transmit the preset contents in the Voice TX memory (T1 ~ T8) by pushing [F1] ~ [F8] on the keyboard.
- Pushing [F1] ~ [F8] while holding down the [Shift] key repeatedly transmits the contents.

When a keyboard or keypad is connected:

- You can transmit the contents in the Voice TX memory (T1 ~ T8) from an external device by setting the “External Keypad,” and then connecting an external keypad to [MIC] or [EXT KEYPAD] on the IC-7610.
5. VOICE TX MEMORY OPERATION

Transmitting a Voice memory content (Continued)

**◇ Repeatedly transmitting**

1. Display the VOICE TX screen.
   - Touching VOICE

2. Touch a Voice TX memory key [T1] ~ [T8] for 1 second.
   - Repeatedly transmits the recorded content.

![Transmitting a Voice memory content](image)

**TIP:**
If the “DATA OFF MOD” is set to “ACC,” “USB” or “LAN,” Voice TX memories cannot be transmitted.

**MENU > SET > Connectors > MOD Input > DATA OFF MOD**

**◇ Information**

- The recorded content is repeatedly transmitted for 10 minutes, unless you manually stop transmission by touching the selected memory.
- You can set the pause interval between the repeated transmissions in the “Repeat Time” item on the VOICE TX SET screen. During this interval, the transceiver returns to receive. (p. 54)
- After 10 minutes have passed, and all of the recorded content in the memory is transmitted, the transceiver automatically returns to receive.
- When a signal is received in the interval between transmissions, the transceiver pauses the next transmission until the signal disappears. However, if the squelch is set to open, the transceiver repeatedly transmits after the repeat interval time expires, even signals are received.
- Touch the selected memory.

3. To close the VOICE TX screen, push EXIT several times.

**◇ Adjusting the output level**

1. Display the Voice TX memory level.
   - Touching TX LEVEL.

2. Touch [TX LEVEL].

3. Touch any Voice memory key other than [T4] or [T8]. ([T1] ~ [T3] or [T5] ~ [T7])
   - The transceiver automatically transmits.

   - To adjust the Transmit voice level for [T4] and [T8], reverse steps 2 and 3.

   ![Voice TX memory level](image)

   - Rotate MAIN DIAL to adjust.

4. While transmitting, rotate MAIN DIAL to adjust the transmit voice level.
   - Adjusting the level too high may result in over modulation, and transmit signal distortion.

5. To close the VOICE TX screen, push EXIT several times.
5. VOICE TX MEMORY OPERATION

VOICE TX SET screen

This set screen is used to set the Automatic Monitor function and the Transmit Repeat Interval.

1. Display the VOICE TX SET screen.

2. Touch the setting item. (Example: Auto Monitor)

3. Select an option. (Example: OFF)
   - Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.

4. To close the VOICE TX SET screen, push EXIT.

Auto Monitor (Default: ON)
Turn the Automatic Monitor function for recorded audio contents transmission, ON or OFF.
- ON: Automatically monitors the transmit audio when transmitting a recorded audio.
- OFF: Monitors the transmit audio only when the Monitor function is ON.

Repeat Time (Default: 5sec)
Set the repeat interval to repeat the voice transmission.
The recorded content is repeatedly transmitted at this set interval.
- Range: 1 ~ 15 seconds

TIP: How to reset to the default setting
Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.

1. Display the VOICE TX SET screen.

2. Touch the setting item. (Example: Auto Monitor)

3. Select an option. (Example: OFF)
   - See to the right for details of the setting items and their options.

4. To close the VOICE TX SET screen, push EXIT.

TIP: How to reset to the default setting
Touching the item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.
6. SD CARD/USB FLASH DRIVE (ADVANCED)

Saving the setting data onto an SD card or USB flash drive

The Memory channels and the transceiver’s settings can be saved onto an SD card or USB flash drive. This function is convenient when:

• Copying the saved data to another IC-7610 to operate using the same data.
• Using an IC-7610 by two or more operators with their own individual settings.

1. Insert an SD card or USB flash drive.
2. Display the SAVE SETTING screen.
   
   ![MENU](SET > SD Card > Save Setting)
   
   ![MENU](SET > USB Flash Drive > Save Setting)

3. Touch “<<New File>>.”

   ![FILE NAME](Set20171003_01)

   TIP: When you have updated the transceiver’s firmware, the “Save Form” item will be added on the setting screen. If this item is set to the earlier firmware version, the confirmation window is displayed after step 3. To save the data in the earlier firmware version, touch [YES].

4. To save the file with the displayed name, touch [ENT].
   ① If you want to change the name, delete the name and re-enter it, and then touch [ENT].
   ② “Save file?” is displayed.

5. Touch [YES].

   • Saves the data settings.

6. To close the SET screen, push [EXIT] several times.
6. SD CARD/USB FLASH DRIVE (ADVANCED)

Loading the saved data files onto an SD card or USB flash drive

You can load the Memory channels and transceiver’s settings from the SD card or USB flash drive to the transceiver.

This function is convenient when:
①The transceiver has “ALL” and “Select” loading options to choose from.

TIP: Saving the current data is recommended before loading other data into the transceiver. (p. 51)

1. Display the LOAD SETTING screen.
   - MENU » SET > SD Card > Load Setting
   - MENU » SET > USB Flash Drive > Load Setting

2. Touch the file to load.

3. Touch “Select.”
   ①If you want to load all the contents on the LOAD OPTION screen, touch “ALL” and go to step 6.

4. Touch the loading options.
   (Example: Antenna Memory)
   • “✓” is displayed left side of the selected option.
   ①The Set mode settings and Memory channel contents are always loaded.

5. Touch “<<Load>>.”
   • “Load file?” is displayed.

6. Touch [YES].
   • After the loading ends, “COMPLETED! Restart the IC-7610.” is displayed.
   ①When you select “REF Adjust” in step 4, “The new "REF Adjust" setting will be saved” is displayed.

7. Turn the OFF transceiver power, then turn it ON again to restart the transceiver.
6. SD CARD/USB FLASH DRIVE (ADVANCED)

Deleting a data file

Follow the steps below to delete the files you no longer need on the SD card or the USB flash drive.

NOTE: Deleted data from a card or flash drive cannot be recalled. Before deleting any data, back up the card data onto your PC.

1. Display the SAVE SETTING screen.
   - MENU » SET > SD Card > Save Setting
   - MENU » SET > USB Flash Drive > Save Setting

2. Touch the file to delete for 1 second.

3. Touch "Delete."
   - "Delete file?" is displayed.
   1. To delete all files, touch "Delete All."
   2. To cancel deleting, push EXIT.

4. Touch [YES].

5. To close the SET screen, push EXIT several times.

Checking the file information

Touch "File Information" on the QUICK MENU to display the file name, size and the saved date.
6. SD CARD/USB FLASH DRIVE (ADVANCED)

Displaying the SD card or USB flash drive information

You can display SD card or USB flash drive capacity, and the time remaining for voice recording (SD card only.)

1. Display the SD CARD or USB FLASH DRIVE screen.
   - [MENU] » SET > SD Card
   - [MENU] » SET > USB Flash Drive

2. Touch “SD Card Info” or “USB Flash Drive info.” (Example: SD Card Info)
   • Displays the card or flash drive’s free space and the capacity.

3. To close the SET screen, push [EXIT] several times.
About the SD card and USB flash drive's folders

You can easily restore data with a backup file, even if the setting data in the SD card is accidentally deleted.

◊ The SD card folder

The folder in the SD card contains the following. The USB flash drive contains the IC-7610 folder, Capture folder and the Setting folder.

- **IC-7610 folder**
  The folders created in the IC-7610 are contained in this folder.

- **Capture folder**
  The captured screen data is saved in the 'png' or 'bmp' format.

- **Decode folder**
  The RTTY and PSK decode log folders are created.

- **PSK folder**
  The transmitted or received PSK decode log data is saved in the 'txt' or 'html' format.

- **RTTY folder**
  The transmitted or received RTTY decode log data is saved in the 'txt' or 'html' format.

- **Setting folder**
  The transceiver’s setting data is saved in the ‘dat’ format.

- **Voice folder**
  The recorded QSO audio date folders are created.

- **yyyymmdd folder**
  Recorded audio files are saved in the ‘wav’ format.
  The folder name is automatically created in the following format: yyyymmdd (yyyy:Year, mm:month, dd:day)

- **VoiceTx folder**
  Recorded voice audio data for the Voice TX function is saved in the ‘wav’ format.

◊ USB flash drive folder
7. MEMORY OPERATION

Memory channels

The Memory mode enables you to quickly select often-used frequencies, modes and other parameters. You can change the operating frequency, mode and so on while operating in the Memory mode. You can temporarily tune all the memory channel frequencies by rotating MAIN DIAL.

<table>
<thead>
<tr>
<th>Memory channel</th>
<th>Displayed</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 ~ 99</td>
<td>Regular memory channels. 1 frequency, 1 mode, 1 filter, memory name, tone settings (including tone frequencies for repeater and tone squelch) and select memory scan setting in each memory channel.</td>
</tr>
<tr>
<td>P1/P2</td>
<td>Scan Edge memory channels. 1 frequency, and 1 mode and 1 filter in each memory channel as scan edges for programmed scans.</td>
</tr>
</tbody>
</table>

Selecting a Memory channel

1. Select the Main band or Sub band. (Example: Main band)
2. Push QUICK, and then touch "VFO/MEMORY" on the Quick menu.
3. Touch [MEMORY] to select the Memory mode.
4. Select the Memory channel. Rotating MULTI to select a channel: Rotate MULTI until you select the Memory channel you want to use. (Example: 2)

To close the VFO/Memory screen, push EXIT.

Selecting a channel on the MEMORY screen: Display the MEMORY screen, and then touch to select a Memory channel. (Example: 2)

• The channel is selected and automatically closes the MEMORY screen.
7. MEMORY OPERATION

Entering memory channel contents

The operating frequency, operating mode, IF filter bandwidth, and so on can be entered to each memory channel. (p. 60)

NOTE: New content you enter will overwrite any content already in the selected memory.

1. Select the Main band or Sub band.
   (Example: Main band)
2. Push [QUICK], and then touch “VFO/MEMORY” to select the VFO mode.
3. Set the frequency, operating mode, and other parameters you want to save in memory.
4. Rotate [MULTI] to select the Memory channel to enter the contents set in step 3. (Example: 2)
   ①You cannot select the channel number when the Mini scope screen, expanded screen or dual screen is displayed.
   ②If “- - - - - - - -” is displayed next to the selected memory channel number, it is a blank channel, meaning that no contents are entered in that channel.
5. Push [QUICK], and then touch “VFO/MEMORY.”
   • The contents are entered in the selected Memory channel.

7. To close the VFO/MEMORY screen, push [EXIT].

To edit the Memory channel contents:
1. Select the Memory channel to edit.
2. Change the frequency and other parameters in the Memory mode.
3. Push [QUICK], and then touch “VFO/MEMORY.”
4. Touch [MW] for 1 second to overwrite onto the selected Memory channel.
7. MEMORY OPERATION

Copying the Memory channel contents

You can copy a Memory channel contents to the VFO or another memory channel.

**Copying to the VFO**
1. Select the Main band or Sub band. (Example: Main band)
2. Select the Memory mode.
3. Rotate \[MULTI\] to select the channel to be copied. (Example: Memory channel 3)
4. Touch \([M \rightarrow VFO]\) for 1 second.
   - The copied contents are entered in the VFO mode.
   - The selected channel to be copied.
   - VFO mode contents before copying: 14.130.00 USB
5. Touch \([VFO]\) to select the VFO mode.
6. To close the VFO/MEMORY screen, push \[EXIT\].

**Copying to the other Memory channel**
1. Select the Main band or Sub band. (Example: Main band)
2. Select the Memory mode.
3. Rotate \[MULTI\] to select the channel to be copied. (Example: Memory channel 3)
4. Display the MEMORY screen.
5. Rotate \[MULTI\] to select the channel to write the copied contents to. (Example: Memory channel 5)
6. Touch \(\) of the selected channel.
7. Touch “Memory Write.”
   - “Write Memory?” is displayed.
8. Touch \[YES\].
   - The copied channel contents are entered to the selected channel.
9. To close the MEMORY screen, push \[EXIT\].
7. MEMORY OPERATION

Entering a memory name

Except for the blank channels, you can assign a name to all memory channels, including scan edges. The names will be displayed along with the frequency, mode and filter number.

1. Display the MEMORY screen.

2. Rotate to select the channel to enter a name. (Example: Memory channel 2)

3. Touch of the selected channel.

4. Touch “Edit Name.”

5. Enter a name, and then touch [ENT]. (Example: #1DX Spot)

6. To close the MEMORY screen, push [EXIT].

You can also select not to display the Memory name on the standby screen.

MENU » SET > Display > Memory Name
7. MEMORY OPERATION

Clearing a memory channel

You can clear a no-longer-used memory channel and reset it as a blank channel, except for the program channels (P1 and P2).

1. Select the Main band or Sub band.  
   (Example: Main band)
2. Select the Memory mode.
3. Rotate <MULTI> to select the channel to clear.  
   (Example: Memory channel 3)
5. To close the VFO/MEMORY screen, push EXIT.

About the MEMORY screen

1. Memory channel number
   Displays the memory channel number.  
   ① “P1” or “P2” is displayed for the Scan Edge memory channels.
2. Memory select icon
   Touch this icon to set the select number “①,” “②,” “③” or OFF. See page 69 for the Select Memory scan. 
   ① You can also touch the icon for 1 second to display the SELECT ALL CLEAR screen, and then select the item to reset the select number.
3. Frequency/Operating mode/IF filter
   Displays the entered frequency, selected operating mode, and the IF filter.
4. Memory name
   Displays the memory name, if entered. 
   ① See the previous for details.
5. Memory menu
   Touch to display the MEMORY MENU. 
   ① You can select between “Edit Name,” “Memory Write” and “Memory Clear”.
6. [▲] and [▼]
   Touch to scroll through the Memory channels, 6 channels at a time.

About the QUICK MENU

While selecting a memory channel with memory contents, push <QUICK> to display the QUICK MENU, where you can select “SELECT,” “Edit Name,” “Memory Write,” “Memory Clear,” and “SELECT All Clear.”
7. MEMORY OPERATION

Memo Pad

There are 5 Memo Pads as the default to save frequencies and operating modes for easy write and recall. You can increase the Memo Pads to 10 in “Memopad Numbers.”

There are 5 Memo Pads as the default to save frequencies and operating modes for easy write and recall. You can increase the Memo Pads to 10 in “Memopad Numbers.”

To display the MEMO PAD screen, push [MP-R] for 1 second or touch [MPAD] on the MENU screen.

Memo Pads are convenient when you want to temporarily memorize a frequency and operating mode, such as when you find a DX station in a pile-up, or when the desired station is busy for a long time and you want to temporarily search for other stations.

Use Memo Pads instead of relying on hastily scribbled notes that are easily misplaced.

Saving the displayed contents into a Memo Pad

1. Select the Main band or Sub band.
   (Example: Main band)
2. Push [QUICK], then touch “VFO/MEMORY” in the Quick menu.
3. Touch [VFO] to select the VFO mode.
   • A beep sounds.
   ① To save additional Pads, repeat steps 1 to 4.
   ② When you save up to the set number of Memo Pads in “Memo Pad Quantity,” the oldest Memo Pad is automatically cleared to make room for the new Memo Pad.

Calling up the Memo Pads

1. Select the Main band or Sub band.
   (Example: Main band)
2. Push [MP-R].
   ① Pushing [MP-R] scrolls through the contents saved in the Memo Pads.

About the MEMO PAD screen

The MEMO PAD screen displays the saved contents in a list, in which you can select or delete the saved contents.

To display the MEMO PAD screen, push [MP-R] for 1 second or touch [MPAD] on the MENU screen.

Key Action

▲ / ▼ Scrolls through the list.

DEL Touch 1 second Deletes the selected Memo Pad.

DEL ALL Touch 1 second Deletes all the Memo Pads.

EXPAND Select to display the MEMO PAD list in a normal or larger size screen.

If you change the frequency or operating mode called up from Memo Pads, the contents are automatically updated in a temporary Pad.
8. SCANS

Scan types

<table>
<thead>
<tr>
<th>Scan types</th>
<th>Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>VFO SCAN</td>
<td>Used to detect a signal by automatically changing the frequency in the VFO mode.</td>
</tr>
<tr>
<td>Programmed scan</td>
<td>Repeatedly scans between two Scan Edge frequencies. The edge frequencies are programmable, and are preset in P1 and P2 as the default. (pp. 61, 64)</td>
</tr>
<tr>
<td>Fine Programmed scan</td>
<td>If the squelch opens while scanning, the tuning step changes to 10 Hz. This reduces the scan speed, but the transceiver keeps scanning.</td>
</tr>
<tr>
<td>MEMORY SCAN</td>
<td>Used to detect a signal by automatically scanning the memories in the Memory mode.</td>
</tr>
<tr>
<td>Memory scan</td>
<td>Repeatedly scans all entered Memory channels.</td>
</tr>
<tr>
<td>Select Memory scan</td>

</tr>
<tr>
<td>∆F SCAN</td>
<td>Repeatedly scans within the ∆F span area. The scan starts from the center frequency. (p. 71)</td>
</tr>
<tr>
<td>Fine ∆F scan</td>
<td>If the squelch opens while ∆F spanning, the tuning step changes to 10 Hz. This reduces the scan speed, but the transceiver keeps scanning.</td>
</tr>
</tbody>
</table>

Preparation

⚠️ Squelch status
Scans work with the Main band’s squelch status. Be sure to adjust the squelch level according to your operating environment.

Normally, set [AF/SQL] to the point where noise disappears, and the TX/RX indicator goes OFF.

When the scan starts with the squelch open:
• For a Programmed scan
When the tuning step is 1 kHz or less, the scan continues until it is manually stopped— it does not pause* even if signals are detected.

*The scan pauses when the squelch is closed and then opened. The scan resumes after 10 seconds has passed when the Scan Resume function is ON. It is cancelled when the function is OFF.

When the tuning step is 5 kHz or more, the scan pauses on each step when the Scan Resume function is ON. It does not pause when the function is OFF.

• For a Memory scan
The scan pauses on each channel when the Scan Resume function is ON. The scan does not pause when the function is OFF.

When the scan starts with the squelch closed:
The scan stops when a signal is detected, regardless of the tuning step.

• When the Scan Resume function is ON, the scan pauses for 10 seconds after detecting a signal, then resumes 2 seconds after the signal disappears.
To display the SCAN screen, push [SCAN].

### Key Action

<table>
<thead>
<tr>
<th>Key</th>
<th>Action</th>

<td>Selects the Select scan number for the Select Memory scan. Each time you touch [SEL No.], “★1,” “★2,” “★3,” and “★1,2,3” are alternately displayed.</td>
</tr>
</tbody>
</table>

### SCAN SET screen

1. Display the SCAN screen.
   ```
   MENU » [SCAN]
   ```

2. Touch [SET].

3. Touch an item to set. (Example: SCAN Speed)

4. Touch an option. (Example: Slow)

5. To close the SCAN SET screen, push [EXIT].

#### SCAN Speed

(Default: Fast)

Set the desired scan speed to slow or fast.
- Slow: Scan speed is slow.
- Fast: Scan speed is fast.

#### SCAN Resume

(Default: ON)

Set the Scan Resume function to ON or OFF.
- OFF: When a signal is detected, cancels the scan.
- ON: When a signal is detected, scan pauses for 10 seconds, then resumes. Two seconds after the signal disappears, the scan resumes.

**TIP: How to reset to the default settings**

Touching an item or its option for 1 second displays the Quick menu, and then touch “Default” to reset to the default setting.
8. SCANS

Programmed scan

Repeatedly scans between two Scan Edge frequencies. The edge frequencies are preset in P1 and P2 as the default.

(P1: 0.500000 MHz / P2: 29.999999 MHz)

1. To change the P1 and P2 Scan Edge Memory channels, see “Entering memory channel contents” (p. 61) for details.
2. If the same frequencies are entered into P1 and P2, the Programmed scan does not start.
3. The Fine Programmed scan is most effective in the SSB, CW, and RTTY modes.

Programmed scan and Fine Programmed scan

Programmed scan operation

1. Select the VFO mode in the Main band.
2. Select the operating mode (example: USB), tuning step (1 kHz).
3. Display the SCAN screen.
   
   MENU » SCAN

4. Touch [PROG] to start the Programmed scan.
   ① “PROGRAM SCAN” blinks while scanning.
   ② You can change the operating mode and the tuning step while scanning.

5. Touch [FINE] to switch to the Fine Programmed scan.
   ① While scanning, “FINE PROGRAM SCAN” blinks instead of “PROGRAM SCAN.”
   ② Touch [FINE] again to return to the Programmed scan.

6. To close the SCAN screen, push [EXIT] several times.
Memory scan

Repeatedly scans all entered Memory channels. Blank (not entered) Memory channels are skipped.

If two or more Memory channels are not entered, the Memory scan does not start.

**Memory scan operation**

1. Select the Main band.
2. Display the SCAN screen.
3. Touch [MEMO] to start the Memory scan.
   - When a signal is detected, the scan pauses according to the “SCAN Resume” setting, and then resumes.
   - To cancel the scan, touch [MEMO] again.
4. To close the SCAN screen, push [EXIT].

**Setting the Select Memory channels**

1. Select the Main band.
2. Display the SCAN screen.
3. Rotate [MULTI] to select memory channels to set as the Select Memory channel. (Example: ★1)
4. Touch [SELECT] to set the selected number.
   - “★1,” “★2,” “★3,” and “(no icon)” are alternately displayed.
5. Repeat steps 3 and 4 to set more than two Memory channels.
   - You cannot set blank channels as Select Memory channels.
   - You can check the Select Memory channel settings on the MEMORY screen.

(Example: “★1” is set to Memory channel 1 and 3)
Memory scan (Continued)

◊ Select Memory scan operation
1. Select the Main band.
2. Display the SCAN screen.

MENU » SCAN

3. Touch [MEMO] to start a regular Memory scan.
   ①When a signal is detected, the scan pauses according to the “SCAN Resume” setting, and then resumes.

4. While scanning, touch [SEL No.] to select the Select Memory scan number.
   ①Each time you touch [SEL No.], “★1,” “★2,” “★3,” and “★1,2,3” are alternately displayed.
   ★1: Channels specified as ★1 are scanned.
   ★2: Channels specified as ★2 are scanned.
   ★3: Channels specified as ★3 are scanned.
   ★1,2,3: Channels specified as ★1, ★2, or ★3 are scanned.

5. Touch [SELECT] to switch to the Select Memory scan.
   ①Touching [SELECT] switches between the Memory scan and the Select Memory scan.

6. To cancel the scan, touch [MEMO].
7. To close the SCAN screen, push [EXIT].

Clearing all Select Memory channel settings
1. Touch [SELECT] for 1 second on the SCAN screen.
   ①The SELECT ALL CLEAR screen is displayed.
2. Touch the Select Memory channel setting to clear.
8. SCANS

\(\Delta F\) scan

\(\Delta F\) scan and Fine \(\Delta F\) scan

(Example: Span: ±10 kHz)

\[
\begin{array}{c}
14.17 \text{ MHz} \\
14.18 \text{ MHz} \\
14.19 \text{ MHz}
\end{array}
\]

Repeatedly scans within the \(\Delta F\) span area. The scan starts from the center frequency.

1. In fine scan (programmed or \(\Delta F\)), the scan speed decreases when the squelch opens, but the transceiver keeps scanning. The scan tuning step changes to 10 Hz when the squelch opens.

\(\Delta F\) scan operation

1. In the Main band, set the center frequency. (Example: in the VFO mode)
2. Set the operating mode and the tuning step. (Example: USB, 1 kHz)
   ①You can also change these settings while scanning.
3. Display the SCAN screen.
   MENU » SCAN
4. Touch [\(\Delta F\) SPAN] to select the span.
   • Options: ±5 kHz, ±10 kHz, ±20 kHz, ±50 kHz, ±100 kHz, ±500 kHz, or ±1 MHz
5. Touch [\(\Delta F\)] to start the scan.
   ①When a signal is detected, the scan pauses according to the “SCAN Resume” setting, and then resumes.
   ①To cancel the scan, touch [\(\Delta F\)] again.
   ①To turn the TS function to scan by the frequency step setting, touch the 100 kHz digit on the frequency readout.
6. To switch to the Fine \(\Delta F\) scan, touch [FINE].
   • The scan frequency step changes to 50 Hz.
   ①Touching [FINE] switches between the \(\Delta F\) scan and the Fine \(\Delta F\) scan.
7. To close the SCAN screen, push EXIT.

Blinks

The frequency before starting the scan

Blinks

The span set in step 4

Blinks
NTP function

The NTP (Network Time Protocol) function synchronizes the internal clock with the time management server.

1. To use this function, an internet connection and default gateway settings are necessary.

Using the NTP Time Synchronize function
Using this function you can manually synchronize the internal clock by accessing the time management server.

1. Display the DATE/TIME screen.
2. Touch "<<NTP TIME SYNC>>."
3. "NTP Time Sync. Please wait..." is displayed.
4. The transceiver starts accessing the NTP server address that is set in the "NTP Server Address" item.
5. When "Time Sync completed." is displayed, touch [OK].
6. To close the DATE/TIME screen, push [EXIT] several times.

Using the NTP function
By turning ON the NTP function, the transceiver automatically synchronizes the internal clock with the time management server.

1. Display the DATE/TIME screen.
2. Touch "NTP Function."
3. Select ON or OFF.
   - When ON is selected, the transceiver starts accessing the NTP server address that is set in the “NTP Server Address” item.
4. To close the DATE/TIME screen, push [EXIT] several times.
Setting the Timers

Setting the Sleep Timer

The Sleep Timer automatically turns OFF the transceiver power when the set time period has passed. You can set the timer to between 5 and 120 minutes, in 5 minute steps.

1. Push TIMER for 1 second.
2. Touch “Sleep Timer.”
3. Rotate MULTI to set the sleep timer. (Example: 120 minutes)
4. Touch [SET] to save the setting and to start the timer.
   • The timer indicator on the TIMER key turns ON.
   • Approximately 10 seconds before the transceiver power turns OFF, the indicator on the key starts blinking.
   • After the transceiver turns OFF, the Sleep Timer set in step 3 is cleared.
   • To pause and resume the timer while the timer is running, push TIMER.
5. To close the TIMER screen, push EXIT.
Setting the Daily Timer
The Daily Timer automatically turns the transceiver power ON or OFF on the set day and time.

1. Push \( \text{TIMER} \) for 1 second.
2. Touch the timer to set (Example: 1)

3. Rotate \( \text{MULTI} \) scroll through the setting items, and then touch an item to select.
   ①Each setting items are described on the next page.
   ①You can reset to the default setting or cancel the setting by pushing \( \text{QUICK} \).

4. After setting the items, touch "<<Set>>" to save them.

5. To close the TIMER screen, push \( \text{EXIT} \).
Setting the Timers (Continued)

Daily Timer setting items

NOTE: All of the following settings are not saved until you touch “<<Set>>.”

Timer Status (Default: OFF)
Select ON to start the Daily Timer, and select OFF to stop the timer.

Reservation Timer (Default: 0:00)
Set the time to automatically turn ON the transceiver power.

Reservation Channel (MAIN) (Default: -- ch)
Reservation Channel (SUB) (Default: -- ch)
The Memory channel set in this item is automatically selected when the transceiver is automatically turned ON by the Reservation Timer, or the set time has come while the transceiver is turned ON.

Power OFF Timer (Default: --:--) Set the time to automatically turn OFF the transceiver power.

Day of the Week (Default: --)
Select a day of the week to set the Daily Timer function.

Repeat Setting (Default: OFF)
Set the Repeat Setting to ON or OFF. When this item is set to ON, the timer is activated every selected day of the week, or everyday if the Day of the Week item is not set.

Example:
• Reservation Timer: 8:00
• Power OFF Timer: 9:30

NOTE: When Power OFF Timer is set to an earlier time than the Reservation Timer time, the transceiver will not be turned OFF automatically.

To automatically turn the transceiver ON and OFF, set Power OFF Timer to a later time than the Reservation Timer time.

To clear the setting, push [QUICK] and touch “Clear.”

To clear the setting, push [QUICK] and touch “Clear.”

Repeat Setting to ON or OFF.
When this item is set to ON, the timer is activated every selected day of the week, or everyday if the Day of the Week item is not set.

To clear the setting, push [QUICK] and touch “Clear.”

<<Set>>
Touch to save all the timer settings for the selected timer.
10. ANTENNA TUNER OPERATION (ADVANCED)

Antenna switching setting when operating with Dualwatch

You can connect a Transmit/Receive antenna to either ANT1 or ANT2 for the normal operation. However, if you want to use separate antennas for transmit and receive you need to set “RX-ANT,” or if you want to add an external device, such as a filter/pre-amplifier for receive you need to set “RX-I/O.”

To change the RX-ANT Connectors Type, touch [TYPE] on the ANTENNA screen, then select between “Connect Receive Antenna” and “Connect External RX Device.”

If you switch the RX-ANT Connectors Type to the opposite type, (to “Connect External RX Device” or to “Connect Receive Antenna”) the previous RX-ANT (or RX-I/O) memory settings for both the Main and Sub bands are cleared.

The “RX-I/O” settings are limited according to the antenna connector setting (ANT1 or ANT2), as follows.

**Example:**
When both the Main and Sub bands are using the same antenna (Example: ANT1) and the RX-ANT Connectors Type is set to “Connect External RX Device,” if the Main is set to RX-I/O, the Sub RX-I/O is forcibly set (temporarily) the same as the Main setting. Turning OFF the RX-I/O on the Sub band clears the RX-I/O settings for both the Sub and the Main bands.

If you turn OFF RX-I/O on the Sub band that was forcibly set by above operation, RX-I/O on the Main band is also forcibly turned OFF, and is displayed.

(Example: Main band=ANT1, Sub band=ANT2)
When the Main (ANT1) and Sub (ANT2) bands are set to different antennas, if you set RX-I/O to the Main band, and then you set RX-I/O to the Sub band, the previous Main band setting is forcibly cleared, and is displayed. Setting Main back to RX-I/O SUB is forcibly cleared, and is displayed.

The Main and Sub bands are not forcibly set or cleared when the RX-ANT Connectors Type is set to “Connect Receive Antenna.”
10. ANTENNA TUNER OPERATION (ADVANCED)

Selecting the antenna connector

Set the antenna connector to “ANT1” or “ANT2,” and turn the receive antenna connector ON or OFF.

1. Select the Main band or Sub band.
2. Select the operating band.
3. Touch [ANT] in the Multi-function key group to set to “ANT1” or “ANT2.”

While “ANT1” is selected, touch [ANT] for 1 second to set the antenna that is connected to [ANT1] for transmitting, and the antenna connected to [RX-ANT IN] for receiving.

While “ANT2” is selected, touch [ANT] for 1 second to set the antenna that is connected to [ANT2] for transmitting, and the antenna connected to [RX-ANT IN] for receiving.

“★” is displayed if you temporarily select an antenna that is different from the one that is saved in memory.

- Touch [ANT MW] for 1 second to save the temporary selection into memory, then “★” disappears.

When not using the [RX-ANT] connector, Set “ANT1” or “ANT2.”

1) When “ANT1/R” or “ANT2/R” is selected, the signal is switched to the [RX-ANT IN] connector, and then reception in the [ANT1] and [ANT2] are disconnected.

When the antenna selection mode ([ANT] SW) is set to “Manual,” each antenna connector is selected according to the saved settings.

MENU » ANTENNA > [ANT] SW
11. OTHER FUNCTIONS

RF Direct Sampling System

The IC-7610 employs an RF direct sampling system and has 2 completely independent and identical receiver circuits for the Main and Sub bands from the antenna to the AF output. RF signals are directly converted to digital data and processed in a Field Programmable Gate Array (FPGA) with Icom’s state of the SDR technology. The RF signals are sent to the A/D converter, resulting in digital signal, then is processed by the FPGA to be restored to an analog audio signal according to the receive mode.

This system is a leading technology marking an epoch in amateur radio.

In the Direct Sampling System, there is no local oscillator or mixer circuits that are used in ordinary super heterodyne systems. That makes the received signal less distorted in the amplification stage, resulting a higher image response received signal.

In the transmit circuit, since the transmit signal is generated by the FPGA regardless of the type of emission, a pure high C/N ratio transmit signal is obtained.
11. OTHER FUNCTIONS

About the RF/SQL Control

You can set the (outer) control type in the RF/SQL Control item in the set mode.

- **Auto:** While in the AM or FM mode, used only as a squelch control. While in the SSB, CW, RTTY, or PSK mode, used only as an RF gain control.
- **SQL:** Used as only a squelch control.
- **RF+SQL:** Used as an RF gain control, and a noise squelch or S-meter squelch.

**When using as an RF gain/squelch control**

(Squelch is fixed open: SSB, CW, RTTY, PSK only)

**When using as an RF gain control**

(RF gain is fixed at maximum.)

**When using as a squelch control**

(RF gain is fixed at maximum.)
**About “USB SEND/Keying”**

You can control transmit, receive and CW/RTTY keying from the PC, through the USB port. Select the control port to be used for communication between the IC-7610 and PC in the “USB SEND,” “USB Keying (CW)” and “USB Keying (RTTY)” items according to your operating needs.

**MENU > SET > Connectors > USB SEND/Keying**

The IC-7610 has two virtual COM ports, A and B. When connecting to a USB port on your PC, the ports are virtually named as USB1 (A) and USB1 (B), and then the transmit and receive control (USB SEND), CW Keying, or RTTY (FSK) Keying signals from the PC are assigned to the DTR/RTS terminals in the virtual port.

**USB SEND**  
(Default: OFF)

**USB Keying (CW)**  
(Default: OFF)

**USB Keying (RTTY)**  
(Default: OFF)

- **OFF:** Turns OFF the function.
- **USB1 (A) DTR:** Uses the DTR terminal on USB1 (A).
- **USB1 (A) RTS:** Uses the RTS terminal on USB1 (A).
- **USB1 (B) DTR:** Uses the DTR terminal on USB1 (B).
- **USB1 (B) RTS:** Uses the RTS terminal on USB1 (B).

**TIP: About the USB SEND/Keying items**

1. When you operate RTTY or CW through your PC’s USB port and your IC-7610, you may not be able to send the “SEND” or “Keying” signals until a few seconds after you connect the USB cable.
2. When you operate through your PC’s USB port and the IC-7610, and connect a second transceiver to another PC USB port, a short “SEND” or “Keying” signal will be sent from the first transceiver. Therefore, we recommend that you do not connect a second transceiver to a USB port of the same PC. Or, always turn OFF the transceiver power before you connect a USB cable.
11. OTHER FUNCTIONS

Measuring SWR

The transceiver has a high-performance SWR meter. This meter displays a stable measurement in real time, even if the transmit output power varies frequently. You can measure the SWR of an antenna itself through the internal antenna tuner.

1. Select the RTTY mode.
2. Set the frequency band for the antenna.
3. Touch the meter indicator several times to display the SWR meter.
   - You can also display the SWR on the Multi-function meter by touching the meter indicator for 1 second.

   4. Select the antenna connector that the antenna that you want to measure is connected to.
5. Push MULTI to adjust the RF POWER to more than 30 W in the Multi-function menu.

   Before transmitting, monitor the operating frequency to make sure you will not cause interference to other stations on the same frequency.

6. Hold down [PTT] (or push TRANSMIT) to transmit.

   The best match is within this range. (1.5 or less)

   ① If the SWR meter indicates 1.5 or less, the antenna is matched.
   ① If the measured SWR is more than 1.5:1, you need to match the antenna with the transceiver.

7. After reading the SWR, release [PTT] (or push TRANSMIT) to return to receive.
11. OTHER FUNCTIONS

Selecting the Display Type
You can select between 2 display backgrounds.

1. Display the DISPLAY screen.
2. Touch “Display Type.”
3. Select the background display type from A and B.
   • A: Black background (default)
   • B: Blue background
4. To close the DISPLAY screen, push EXIT.

Selecting the Display Font
You can select between 2 frequency readout fonts.

1. Display the DISPLAY screen.
2. Touch “Display Font.”
3. Select the display font type from “Basic” and “Round.”
   • Basic (default)
   • Round
4. To close the DISPLAY screen, push EXIT.

Displaying my call sign
You can set to display your own call sign at power ON.
(Example: displaying the call sign JA3YUA)

1. Display the DISPLAY screen.
2. Touch “My Call.”
3. Enter “JA3YUA,” and touch [ENT] to save.

4. To close the DISPLAY screen, push EXIT.
Screen Capture function

You can capture the transceiver display onto an SD card or a USB flash drive. Most of the screens used in this manual are captured using this function. However, some screens cannot be captured.

Setting the Screen Capture function
1. Display the “Screen Capture [POWER] Switch” screen.

2. Touch “ON” to turn ON the Screen Capture function.
3. Touch “Screen Capture Storage Media” to select “SD Card” or “USB Flash Drive” to save the captured screens.
4. Touch “Screen Capture File Type” to set the screen capture file type to “PNG” or “BMP.”

Tips: You can also assign the Screen Capture function to the [Print Screen] key on the USB keyboard.

Capturing a screen
1. Display the screen that you want to capture.
2. Push [POWER].
   - “SCREEN CAPTURE Completed” is displayed.
   - If the “Screen Capture Keyboard [Print Screen]” is set to ON, push [Print Screen] on the keyboard.

Viewing a captured screen
1. Display the SCREEN CAPTURE VIEW screen.

   - The capture screen list is displayed.
   - The latest screen capture is at the top of the list.
2. Touch the screen capture to view.
   - The indicator on the NR key blinks while viewing a screen capture.
   - You can view the next screen capture by rotating MULTI.

To display the file information or delete captured screens,
While selecting a file on the SCREEN CAPTURE VIEW screen, push QUICK.

3. To close the SD CARD or USB FLASH DRIVE screen, push EXIT several times.
11. OTHER FUNCTIONS

REF adjustment

You can perform a rough frequency calibration by receiving the radio station WWV, WWVH, or other frequency signals.

NOTE:
- The transceiver has been adjusted and tested at the factory before being shipped out. You should not have to recalibrate.
- Before performing a frequency calibration, you have to set “Calibration Marker” to ON.
- Spurious signal waveforms may be displayed while the Calibration Marker is ON.

Before performing a frequency calibration, set the following items as described in the table below.

| Operating mode | USB | AF/RF/SQL | Decent audibility | RF/SQL | Maximum RF gain | TWIN PBT | CLR | Reset by holding down for 1 second. | RIT, TX | OFF (No icon) |
--- | --- | --- | --- | --- | --- | --- | --- | --- | --- | --- |

1. Set the frequency to the standard frequency station minus 1 kHz.
   1) If receiving WWV or WWVH (at 15.00000 MHz) as your standard frequency, set the operating frequency to 14.99900 MHz.

2. Set “Calibration Marker” to ON.

3. Select the “REF Adjust” item.

4. Rotate (MULTI) to adjust for a zero beat with the received standard signal.
   1) “Zero beat” means that the exact same frequencies are set to 2 signals, resulting in a single tone being transmitted.

5. Set “Calibration Marker” to OFF.

6. Push (EXIT) several times until the MENU screen is closed.
12. MAINTENANCE (ADVANCED)

Cleaning

DO NOT use harsh solvents such as benzine or alcohol when cleaning, because they will damage the transceiver surfaces.

If the transceiver becomes dusty or dirty, wipe it clean with a dry, soft cloth.

Replacing fuse

If a fuse blows, or the transceiver stops functioning, find and repair the cause of the problem. Then replace the damaged fuse with a new, adequately rated fuse.

*Spare fuses are supplied with the transceiver.

The fuses are installed in the DC power cable and in the inside circuitry, to protect the transceiver.

- DC power cable fuses ......................... ATC 30 A
- Circuitry fuse .................................. ATC 5 A

**WARNING!**

- Disconnect the DC power cable from the transceiver before replacing the fuse.
- NEVER use fuses that are not specified.

**DC power cable fuses**

See the following illustration to replace the DC power cable fuses.
Replacing fuse (Continued)

✧ Circuitry fuse
1. Unscrew 2 screws to remove the carrying handle, if attached.

2. Remove the 10 top cover screws, then remove the cover.

3. Remove the 15 shield screws, then remove the shield cover.

4. Replace the circuitry fuse as shown below.

CAUTION: When you remove a fuse, use longnose pliers to protect your fingers and the fuse holders.

ATC 5 A fuse

5. Replace the removed parts.
Touch screen calibration function

When no screen action occurs, or a different function is activated after touching the screen, the touched point and the detected point may be different. In that case, the Touch screen calibration function helps to correct the touch screen sensing accuracy.

1. Display the OTHERS screen.
   - [MENU] » Set > Others

2. Touch “Touch Screen Calibration.”
   - A dot appears on the screen.

3. Touch the dot that is displayed on the screen.
   - A new dot appears in another position.

4. Repeat step 3.

   When the calibration is complete, the transceiver returns to the OTHERS screen.

TIP: When the touch screen is not accurate, and you cannot access the OTHERS screen.

Do the following steps to display the “Touch Screen Calibration” screen.

1. Turn OFF the transceiver.
2. While holding down [MENU] and [EXIT], push [POWER] to display the “Touch Screen Calibration” screen.
3. Repeat step 3 and 4 on the left column.
4. Touch the frequency readout or a key on the touch screen to confirm that the touch screen is working correctly.
13. UPDATING THE FIRMWARE

General

◇ About updating the firmware
You can update the IC-7610’s firmware using an SD card or a USB flash drive. Updating the firmware adds new functions and/or improves performance parameters.

You can download the latest firmware from the Icom website.
   http://www.icom.co.jp/world/index.html

◇ Checking the firmware version
Check the firmware version when you turn ON the transceiver.

The firmware version is displayed

TIP: You can also check the firmware version on the INFORMATION screen.

   MENU > SET > Others > Information
13. UPDATING THE FIRMWARE

◊ Preparation

Access the following URL and download the firmware file.

http://www.icom.co.jp/world/index.html

These instructions are based on Microsoft® Windows® 7.

1. Click [Support].

2. Click the “Firmware Updates/Software Downloads” link.

3. Click the desired firmware file link in the IC-7610 group.

4. Read “Regarding this Download Service” carefully, and then click [Agree].

5. Click “Save as” in the displayed File Download dialog.

6. Select the location where you want to save the firmware, and then click [Save] in the displayed File Download dialog.
   • The file starts downloading.
   • The firmware and the firn utility are compressed in a “zip” format folder. Unzip it before use.

◊ Unzipping the firmware folder

1. Right-click the downloaded firmware folder (zip format).
   • Right-click menu is displayed.

2. Click “Extract All...”
   • After unzipping, a folder is created in the same location as the downloaded folder.
   • In the “7610_*” folder, “7610_*.dat” is created.
     * Represents the release number.
## 13. UPDATING THE FIRMWARE

### Updating the firmware

**IMPORTANT:** To update the firmware, first format your SD card or USB flash drive using the IC-7610. Then copy the downloaded firmware data from your PC into the IC-7610 folder on the card or flashdrive.

**CAUTION: NEVER** turn OFF the transceiver while updating the firmware. If you turn OFF the transceiver, or if a power failure occurs while updating, the transceiver firmware will be damaged and you will have to send the transceiver back to the nearest Icom distributor for repair. This type of repair is out of warranty, even if the transceiver warranty period is still valid.

**TIP: BE SURE** to unzip the downloaded file. See the previous page for details.

1. Copy the downloaded firmware data into the IC-7610 folder on an SD card or a USB flash drive.

2. Insert the SD card or USB flash drive into the transceiver.

3. Display the SD CARD or USB FLASH DRIVE screen.

   - **MENU** > **SET > SD Card**
   - **MENU** > **SET > USB Flash Drive**

4. Touch “Firmware Update,” and then after you read and agree with all the precautions, touch [YES].
   - The file selecting screen is displayed.

5. Touch the Firmware (Example: 7610_101).
   - The final confirmation screen is displayed.
   - Carefully read all the displayed precautions.

---

**Continued on the next page.**
6. After you read and agree with all the precautions, touch [YES] for 1 second.
   • The updating starts.

7. Follow the instructions on the transceiver screen.
   ① The IC-7610 reads the firmware file from the SD card or USB flash drive and writes it to the main CPU, sub CPU, front CPU, and FPGA.
   ② Downloading and loading status are displayed in the dialogs.

8. When the update is completed, “Firmware updating has completed.” is displayed in the dialog.
   • The IC-7610 will automatically restart.
   ① After the updating finishes, the operating screen is displayed.
