GENERAL

INTRODUCTION

SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of the publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions. These are issued as required.

ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts : components, kits, or chassis. If the part number is not known, include the chassis or kit number of which it is a part, and a sufficient description of the required component for proper identification.

PERSONAL SAFETY

The following precautions are recommended for personal safety:

- DO NOT transmit if someone is within two feet (0.6 meter) of the antenna.
- DO NOT transmit until all RF connectors are secure and any open connectors are properly terminated.
- SHUT OFF this equipment when near electrical blasting caps or while in an explosive atmosphere.
- All equipment should be properly grounded before power-up for safe operation.
- This equipment should be serviced by only qualified technicians.

PRE-INSTALLATION CONSIDERATIONS

1. UNPACKING

Unpack the radio from its shipping container and check for accessory items. If any item is missing, please contact KENWOOD immediately.

2. PRE-INSTALLATION CHECKOUT

2-1. Introduction

Each radio is adjusted and tested before shipment. However, it is recommended that receiver and transmitter operation be checked for proper operation before installation.

2-2. Testing

The radio should be tested complete with all cabling and accessories as they will be connected in the final installation. Transmitter frequency, deviation, and power output should be checked, as should receiver sensitivity, squelch operation, and audio output. Signalling equipment operation should be verified.

3. PLANNING THE INSTALLATION

3-1. General

Inspect the vehicle and determine how and where the radio antenna and accessories will be mounted.

Plan cable runs for protection against pinching or crushing wiring, and radio installation to prevent overheating.

3-2. Antenna

The favored location for an antenna is in the center of a large, flat conductive area, usually at the roof center. The trunk lid is preferred, bond the trunk lid and vehicle chassis using ground straps to ensure the lid is at chassis ground.

GENERAL

3-3. Radio

The universal mount bracket allows the radio to be mounted in a variety of ways. Be sure the mounting surface is adequate to support the radio's weight. Allow sufficient space around the radio for air cooling. Position the radio close enough to the vehicle operator to permit easy access to the controls when driving.

3-4. DC Power and wiring

1. This radio may be installed in negative ground electrical systems only. Reverse polarity will cause the cable fuse to blow. Check the vehicle ground polarity before installation to prevent wasted time and effort.
2. Connect the positive power lead directly to the vehicle battery positive terminal. Connecting the Positive lead to any other positive voltage source in the vehicle is not recommended.
3. Connect the ground lead directly to the battery negative terminal.
4. The cable provided with the radio is sufficient to handle the maximum radio current demand. If the cable must be extended, be sure the additional wire is sufficient for the current to be carried and length of the added lead.

4. INSTALLATION PLANNING – CONTROL STATIONS

4-1. Antenna system

The antenna system selection depends on many factors and is beyond the scope of this manual. Your KENWOOD dealer can help you select an antenna system that will best serve your particular needs.

4-2. Radio location

Select a convenient location for your control station radio which is as close as practical to the antenna cable entry point. Secondly, use your system's power supply (which supplies the voltage and current required for your system). Make sure sufficient air can flow around the radio and power supply to allow adequate cooling.

SERVICE

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained in this manual.

NOTE

If you do not intend to use the speaker 3.5-mm jack, the D-sub 15-pin connector and SMA connector, fit the supplied speaker-jack cap, ACC cap and SMA cap to stop dust and sand from getting in.

NX-720H(G)/720H

SYSTEM SET-UP

REALIGNMENT

1. Modes

Mode	Function
User mode	For normal use.
Panel test mode	Use by the dealer to check the fundamental characteristics.
Panel tuning mode	Used by the dealer to tune the transceiver.
PC mode	Used for communication between the transceiver and PC.
Data programming mode	Used to read and write frequency data and other features to and from the transceiver.
PC test mode	Used to check the transceiver using the PC. This feature is included in the FPU.
PC tuning mode	Used to tune the transceiver using the PC.
Firmware programming mode	Used when changing the main program of the flash memory.
Clone mode	Used to transfer programming data from one transceiver to another.
Firmware version information	Used to confirm the internal firmware version.

2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
Panel test mode	[A]+Power ON
Panel tuning mode	Panel test mode+[s]
PC mode	Received commands from PC
Firmware programming mode	[Δ]+Power ON
Clone mode	[<B]+Power ON (One second)
Firmware version information	[s]+Power ON

3. Panel Test Mode

Setting method refer to ADJUSTMENT.

4. Panel Tuning Mode

Setting method refer to ADJUSTMENT.

5. PC Mode

5-1. Preface

The transceiver is programmed using a personal computer, a programming interface (KPG-46A/46U) and FPU (programming software).

The programming software can be used with a PC. Figure 1 shows the setup of a PC for programming.

NX-720H(G)/720H

REALIGNMENT

5-2. Connection procedure

1. Connect the transceiver to the computer using the interface cable.

Note:

- You must install the KPG-46U driver in the computer to use the USB programming interface cable (KPG-46U).
2. When the Power is switched on, user mode can be entered immediately. When the PC sends a command, the transceiver enters PC mode, and "PROGRAM" is displayed on the LCD.
When data is transmitting from the transceiver, the red LED blinks.
When data is receiving by the transceiver, the green LED blinks.

Note:

The data stored in the computer must match the "Model Name" when it is written into the flash memory.

5-3. KPG-46A description

(PC programming interface cable: Option)

The KPG-46A is required to interface the transceiver to the computer. It has a circuit in its D-sub connector (KPG-46A: 9-pin) case that converts the RS-232C logic level to the TTL level.

The KPG-46A connects the 8-pin microphone connector of the transceiver to the RS-232C serial port of the computer.

5-4. KPG-46U description

(USB programming interface cable: Option)

The KPG-46U is a cable which connects to a USB port on a computer.

When using the KPG-46U, install the supplied CD-ROM (with driver software) in the computer. The KPG-46U driver runs under Windows XP, Vista or 7.

The latest version of the USB driver is available for download from the following URL:

<http://www.kenwood.com/usb-com/>
(This URL may change without notice.)

5-5. Programming Software : KPG-141D (ver.3.00 or later) description

The FPU is the programming software for the transceiver supplied on a CD-ROM. This software runs under Windows XP, Vista or 7 on a PC.

The data can be input to or read from the transceiver and edited on the screen. The programmed or edited data can be printed out. It is also possible to tune the transceiver.

Fig. 1

6. Firmware Programming Mode

6-1. Preface

Flash memory is mounted on the transceiver. This allows the transceiver to be upgraded when new features are released in the future. (For details on how to obtain the firmware, contact Customer Service.)

6-2. Connection procedure

Connect the transceiver to the personal computer using the interface cable (KPG-46A/46U). (Connection is the same as in the PC Mode.)

6-3. Programming

1. Start up the firmware programming software (Fpro.exe (ver. 6.1 or later)). The Fpro.exe exists in the KPG-141D installed folder.
2. Set the communications speed (normally, 115200 bps) and communications port in the configuration item.
3. Set the firmware to be updated by File name item.
4. Press and hold the [Δ] key while turning the transceiver power ON. Then, the orange LED on the transceiver lights and "FIRM PRG" is displayed.
5. Check the connection between the transceiver and the personal computer, and make sure that the transceiver is in the Program mode.
6. Press "write" button in the window. When the transceiver starts to receive data, the "LOADING" display lights.
7. If writing ends successfully, the checksum is calculated and a result is displayed.
8. If you want to continue programming other transceivers, repeat steps 4 to 7.

NX-720H(G)/720H

REALIGNMENT

6-4. Function

If you press the [Δ] key while "FIRM PRG" is displayed, the checksum is calculated, and a result is displayed. If you press the [Δ] key again while the checksum is displayed, "FIRM PRG" is redisplayed.

Note:

- This mode cannot be entered if the Firmware Programming mode is set to Disable in the Programming software.
- Normally, write in the high-speed mode.

7. Clone Mode

Programming data can be transferred from one transceiver to another by connecting them via their modular microphone jacks. The operation is as follows (the transmit transceiver is the source and the receive transceiver is a target). Clone mode should be enabled.

The following data cannot be cloned.

- Tuning data
- Embedded message with password
- Model name data
- ESN (Electronic Serial Number) data

Note :

The following data can be cloned.

- Fleet (own)/ID (own) for FleetSync
- Unit ID (own) for NXDN
- ID (own) for MDC-1200

1. Turn the source transceiver power ON with the [] key held down (1 second), "CLONE MODE" is displayed on the LCD.
2. Power on the target transceiver.
3. Connect the cloning cable (No. E30-3382-05) to the modular microphone jacks on the source and target.
4. Press the [s] key on the source transceiver.
The data of the source is sent to the target. While the source is sending data, red LED blinked. While the target is receiving the data, "PROGRAM" is displayed and green LED blinked. When cloning of data is completed, the source displays "END", and the source red LED turned off, and the target automatically operates in the User mode. The target can then be operated by the same program as the source.
5. The other target can be continuously cloned. Carry out the operation in step 2 to 4.

7-1. How to enter the data password

If the read authorization password is set in the optional feature menu, you must enter the password (Source transceiver) to activate a clone mode.

You can use 0~9 to configure the password. The maximum length of the password is 6 digits.

1. []+Power ON.
2. "CLONE LOCK" is displayed on the LCD.
3. If the [↗] and [↘] keys is pressed while "CLONE LOCK" is

displayed, numbers (0 to 9) are displayed flashing. When you press the [s] key, the currently selected number is determined. If you press the [s] key after entering the password in this procedure, "CLONE MODE" is displayed if the entered password is correct. If the password is incorrect, "CLONE LOCK" is redisplayed.

Fig. 2

7-2. Flow chart (Source transceiver)

8. Firmware Version Information

Press and hold the [s] key while turning the transceiver power ON and then keep pressing and holding the [s] key, the firmware version information appears on the LCD.

NX-720H(G)/720H

INSTALLATION

1. Connection Cable (KCT-60: Option)

The KCT-60 connection cable kit is used to connect the transceiver to a Horn alert cable, KCT-18 (Ignition sense cable), KES-5 (External speaker), or through the KCT-36 extension cable.

1-1. Installing the KCT-60 (Connection cable) in the transceiver

1. Remove the ACC. cap on the rear of the transceiver.
2. Connect the D-sub connector of the KCT-60 to the D-sub 15-pin terminal of the transceiver.
3. Connect the 15-pin connector of the KCT-60 to a Horn alert cable, KCT-18, KES-5, or through a KCT-36 extension cable.

Note: You must setup using the KPG-141D.

1-2. Terminal function

D-sub 15-pin Pin No.	Name	Molex 15-pin Pin No.
1	SB	1
2	IGN	2
3	PA or EXT-SP	12
4	DO	4
5	DI	5
6	FNC1	9
7	FNC2	11
8	FNC3	7
9	FNC4	6
10	FNC5	8
11	FNC6	10
12	5C	-
13	HR1	13
14	HR2	14
15	GND	3

2. Horn Alert Function

The Horn alert function (max. 2A drive) is enabled by installing the KCT-60 in the transceiver.

2-1. Installation Procedure

1. Remove the ACC. cap on the rear of the transceiver.
2. Connect the D-sub connector of the KCT-60 to the D-sub 15-pin terminal of the transceiver.
3. Insert the two crimp terminals of the Horn alert cable to pins 13 and 14 of the square plug.
4. Connect the square plug to the 15-pin connector of the KCT-60.
5. Connect the remaining two Horn alert cables to your car Horn alert signal control.

The internal FET switch can be controlled by turning the HA function on/off and by using a signaling decode output. The maximum current of HA is 2A. This switch is the FET switch of P-channel type. Therefore, a DC power supply is necessary to use the HR1. The voltage range is from 5V to 16V.

Note: You must set up using the KPG-141D.

3. Ignition Sense Cable (KCT-18: Option)

The KCT-18 is an optional cable for enabling the ignition function. The ignition function lets you turn the transceiver power on and off with the car ignition key.

3-1. Installing the KCT-18 (Ignition sense cable) in the transceiver

NX-720H(G)/720H

INSTALLATION

4. External Speaker (Option)

4-1. KES-5

External speaker KES-5 can be installed for KCT-60.

■ Connection procedure

1. Remove the ACC. cap on the rear of the transceiver.
2. Connect the D-sub connector of the KCT-60 to the D-sub 15-pin terminal of the transceiver.
3. Insert the two crimp terminals of the KES-5 to pins 3 and 12 of the square plug.
4. Connect the square plug to the 15-pin connector of the KCT-60.

Note:

You must set up using the KPG-141D.

Before the external speaker can be used, you must assign one of the keys as "External Speaker", using the KPG-141D.

5. Changing Serial Port Level

5-1. Change FNC1 (TXD) and FNC2 (RXD) of D-SUB 15-pin connector from TTL level to RS-232C level

FNC1 (TXD /6pin) and FNC2 (RXD /7pin) of D-SUB 15-pin connector are configured at the TTL level as the default value. But you can change these serial port level to RS-232C level through the RS-232C level converter IC (IC516) by configuring the port.

Remove the R664, R635 and R662 chip jumpers and solder the chip jumpers to R666, R633 and R665.

5-2. Change FNC1 (TXD), FNC2 (RXD), FNC3 (RTS) and FNC4 (CTS) of D-SUB 15-pin connector from TTL level to RS-232C level

FNC1 (TXD /6pin), FNC2 (RXD /7pin), FNC3 (RTS /8pin) and FNC4 (CTS /9pin) of D-SUB 15-pin connector are configured at the TTL level as the default value. But you can change these serial port level to RS-232C level through the RS-232C level converter IC (IC516) by configuring the port.

Remove the R664, R635, R662, R659, R658 and R632 chip jumpers and solder the chip jumpers to R666, R633, R665, R663, R660 and R630.

■ In the case of 5-1.

[TTL level]

R664, R635 and R662: 0Ω chip jumper.

R666, R633 and R665: open.

[RS-232C level]

R666, R633 and R665: 0Ω chip jumper.

R664, R635 and R662: open.

■ In the case of 5-2.

[TTL level]

R664, R635, R662, R659, R658 and R632: 0Ω chip jumper.

R666, R633, R665, R663, R660 and R630: open.

[RS-232C level]

R666, R633, R665, R663, R660 and R630: 0Ω chip jumper.

R664, R635, R662, R659, R658 and R632: open.

6. Changing of Signal Type

6-1. Change signal output of D-SUB connector from DEO to AFO

The output (4pin) of D-SUB 15-pin connector is configured at the DEO as the default value.

Remove the R796 chip jumper and solder the clip jumper to R798.

6-2. Change signal input of D-SUB connector from DI to MI2

The input (5pin) of D-SUB 15-pin connector is configured at the DI as the default value.

Remove the R797 chip jumper and solder the chip jumper to R799.

NX-720H(G)/720H

DISASSEMBLY FOR REPAIR

1. Disassembly Procedure

1. Remove the cabinet, top packing and shielding plate of the transceiver.

2. To remove the panel assembly, first turn the transceiver upside down. Then, insert a flat-head screwdriver into the holes of the chassis and tilt it in the direction as shown by the arrow.

3. Disconnect the flat cable from connector of the panel assembly.

4. Hook the finger to hole and while pulling the speaker holder to this side, expand the panel side of ① to ③, and remove the speaker holder from the front panel.

5. When removing the TX-RX PCB, first remove the top packing. Then, remove the solder of the antenna hot pin and positive terminal of the DC cord. Remove the 16 screws from the TX-RX PCB, power module, and audio amp.

NX-720H(G)/720H

DISASSEMBLY FOR REPAIR

Note:

When you supply power to the TX-RX PCB after removing the TX-RX PCB from the chassis, solder the positive and ground terminals of the DC cord (Recommendation: E30-3448-25) to the + and GND terminals of the TX-RX PCB.

- Pull it out behind the chassis by rotating the bush ③ of the DC cord 90 degrees in the direction of the arrow after the screw ① in the negative terminal is removed, and the positive terminal ② is removed from the chassis.

2. Precautions for Reassembly

- The tab from ① to ③ is applied the front panel first. And, ④ to ⑥ tabs inside the front panel is pushed.

- When mounting the panel assembly, pass the flat cable through the hole of the chassis as shown below then connect the flat cable to connector of the panel assembly.

- Fit the panel assembly into the two tabs of the chassis top side first. Then, fit the panel assembly into the two tabs of the chassis bottom side by turning the panel assembly.

3. Correspondence when replacing the LED (D22 and D23)

When replacing the LED (D22 and D23), it makes it to length.

NX-720H(G)/720H

CIRCUIT DESCRIPTION

1. Overview

The NX-720 is a VHF Mobile transceiver designed to operate in the frequency range of 136 to 174MHz. The unit consists of a receiver, transmitter, phase-locked loop (PLL) frequency synthesizer, baseband parts, power supply, and control circuits.

2. Frequency Configuration

The receiver is a double-conversion super-heterodyne using a first intermediate frequency (IF) of 49.95MHz and a second IF of 450kHz. Incoming signals from the antenna are mixed with the local signal from the PLL circuit to produce the first IF of 49.95MHz. This is then mixed with the 50.4MHz second local oscillator output to produce the 450kHz second IF. The transmit signal frequency is generated by the PLL VCO, and modulated by the signal from the DSP. It is then amplified and fed to the antenna.

Fig.1 Frequency configuration

3. Receiver System

3-1. RF circuit

An incoming RF signal from the antenna terminal is passed through the antenna switch (D110, 111 and 107) and then the bandpass filter (L215, 216). The bandpass filter is adjusted by a variable capacitor. The input voltage to the variable capacitor is regulated by the voltage output from the D/A converter (IC712). The signal is amplified by an RF amplifier (Q202), and passed through the bandpass filter (L207, 209, 210 and 220). The resulting signal is applied to the first mixer (Q201) where it is mixed with the first local oscillator signal output from the frequency synthesizer to produce the first IF (49.95MHz).

3-2. IF circuit

The first IF signal is passed through a four-pole monolithic crystal filter (XF1) to reject the adjacent channel signal. The filtered first IF signal is amplified by the first IF amplifier (Q305) and then applied to the IF system IC (IC303). The IF system IC provides a second mixer, AGC amplifier, and RSSI (Received Signal Strength Indicator).

The second mixer mixes the first IF signal with the 50.4MHz of the second local oscillator output and produces the second IF signal of 450kHz.

The second IF signal is passed through the ceramic filter (CF1) to reject the adjacent channel signal. The filtered second IF signal is amplified by the AGC amplifier.

The signal from the AGC amplifier is input to an AD converter in ASIC (IC507) through the ceramic filter (CF2).

Fig.2 Receiver System

NX-720H(G)/720H

CIRCUIT DESCRIPTION

3-3. Audio amplifier circuit

Audio processing (high-pass filter, low-pass filter, de-emphasized and so on) in FM mode and decoding in NXDN mode are processed by the DSP (IC502). Audio signals from the ASIC (IC507), IC502 goes through the amplifier (IC711). The signal then goes through the D/A converter (IC712) and an amplifier (IC714).

3-4. Squelch Circuit

This circuit amplifies the demodulated noise signal from the ASIC (IC507) after filtering through a LPF and HPF circuit. The amplified signal is then converted to a DC signal by the detection circuit. The converted signal is fed back to IC507.

Fig. 3 Squelch Circuit

4. Transmitter System

Fig. 4 Transmitter System

4-1. Audio Band Circuit

The signal from the microphone is amplified by IC703 (1/2) and limited by the AGC circuit composed of D703, D704, Q703 and Q704. IC703 (2/2) works as an anti-aliasing LPF filter.

4-2. Baseband Circuit

The audio signal output from the Audio band circuit is converted to digital data with a sampling frequency of 48 kHz. This digital data is sent to the DSP (IC502), and voice signals of 300Hz or lower and frequencies of 3kHz or higher are cut off so that an audio range 300Hz to 3kHz is extracted. The audio signal is then pre-emphasized in FM mode and synthesized with the signals, such as QT and DQT, as required, and is then output from the ASIC (IC507). In Digital mode, the audio signal is converted to the 4-Level FSK baseband signal and is output from IC507. The DTMF and MSK baseband signals are also generated by the DSP and output from IC507.

LPF (IC701) works as smoothing filter. The output level according to the transmit carrier is fine-adjusted according to each modulation method.

4-3. Drive and Final amplifier

The signal from the T/R switch (D17 is on) is amplified by the drive amplifier (Q102) to 16~17dBm. The output of the drive amplifier is amplified by the final amplifier module (IC102) to 50W (5.0W when the power is low). The output of the final amplifier module is then passed through the harmonic filter (LPF) and antenna switch (D110, D111 are on) and directional coupler and is applied to the antenna terminal.

4-4. APC circuit

The Automatic transmission power control (APC) circuit stabilizes the transmitter output power at a predetermined level by detecting the power module output with the directional COUPLER and diode detector (D104 and D105). The diode detector (D104 and D105) applies the detected voltage to the DC amplifier IC103 (2/2).

The APC circuit is configured to protect over-current of the power module due to fluctuations of the load at the antenna end and to stabilize transmission output at voltage and temperature variations.

Fig. 5 APC Circuit

NX-720H(G)/720H

CIRCUIT DESCRIPTION

5. PLL Frequency Synthesizer

5-1. TCXO (X1)

The TCXO (X1) generates a reference frequency of 16.8MHz for the PLL frequency synthesizer. This reference frequency is applied to pin 9 of the PLL IC (IC2) and is connected to the IF circuit as a 2nd local signal through the Tripler.

The frequency adjustment is achieved by switching the ratio of the dividing frequency. The resolution of the adjusting frequency is approximately 4Hz.

5-2. VCO

There is an RX VCO and a TX VCO.

The TX VCO (Q7) generates a transmit carrier and the RX VCO (Q6) generates the 1st local signal. For the VCO oscillation frequency, the transmit carrier is 136 to 174 MHz and the 1st local signal is 185.95 to 223.95MHz.

The VCO oscillation frequency is determined by one system of operation switching terminal "T/R" and two systems of voltage control terminals "CV" and "ASSIST".

The operation switching terminal, "T/R", is controlled by the control line (/T_R) output from the ASIC (IC507). When the /T_R logic is low, the VCO outputs the transmit carrier and when it is high, it outputs the 1st local receive signal.

The voltage control terminals, "CV" and "ASSIST", are controlled by the PLL IC (IC2) and ASIC (IC507) and the output frequency changes continuously according to the applied voltage. For the modulation input terminal, "VCO_MOD", the output frequency changes according to the applied voltage. This is used to modulate the VCO output. "VCO_MOD" works only when "/T_R" is low.

5-3. PLL IC (IC2)

The PLL IC compares the differences in phases of the VCO oscillation frequency and the TCXO reference frequency, returns the difference to the VCO CV terminal and realizes the "Phase Locked Loop" for the return control. This allows the VCO oscillation frequency to accurately match (lock) the desired frequency.

When the frequency is controlled by the PLL, the frequency convergence time increases as the frequency difference increases when the set frequency is changed. To supplement this, the ASIC (IC507) is used before control by the PLL IC to bring the VCO oscillation frequency close to the desired frequency. As a result, the VCO CV voltage does not change and is always stable at approximately 2.5V.

The desired frequency is set for the PLL IC by the ASIC (IC507) through the 3-line "SDO1", "P_SCK1", "/PCS_RF" serial bus. Whether the PLL IC is locked or not is monitored by the ASIC through the "PLD" signal line. If the VCO is not the desired frequency (unlocked), the "PLD" logic is low.

The modulation signal of the Low-speed-Data is applied to pin 23 of the PLL IC (IC2).

The modulation signal that is digital data of a sampling frequency of 96 kHz is set for the PLL IC by the DSP (IC502) through the "PLL_MOD" line.

5-4. Local Switch (D16, D17)

The connection destination of the signal output from the buffer amplifier (Q11) is changed with the diode switch (D17) that is controlled by the transmission power supply, HSW, and the diode switch (D16) that is controlled by the reception power supply, 50R. If the HSW logic is high, it is connected to a transmit-side drive (Q102). If the HSW logic is low, it is connected to a receive-side mixer (Q202).

Fig. 6 PLL circuit

NX-720H(G)/720H

CIRCUIT DESCRIPTION

6. Control Circuit

The control circuit consists of the ASIC (IC507) and its peripheral circuits. IC507 mainly performs the following:

- 1) Switching between transmission and reception via the PTT signal input.
- 2) Reading system, zone, frequency, and program data from the memory circuit.
- 3) Sending frequency program data to the PLL.
- 4) Controlling the squelch on/off using the DC voltage from the squelch circuit.
- 5) Controlling the audio mute circuit using the decode data input.

6-1. ASIC

The ASIC (IC507) is a 32bit RISC processor, equipped with a peripheral function and ADC/DAC.

This ASIC operates at 18.432MHz clock and 3.3V /1.5V DC. It controls the flash memory, SRAM, DSP, the receive circuit, the transmitter circuit, the control circuit, and the display circuit and transfers data to or from an external device.

6-2. Memory Circuit

The memory circuit consists of the ASIC (IC507), the SRAM (IC503) and the flash memory (IC501). The flash memory has a capacity of 32Mbit which contains the transceiver control program for the ASIC and stores the data. It also stores the data for the transceiver channels and operating parameters that are written by the FPU. This program can be easily written from external devices. The SRAM has a capacity of 1Mbit which contains the work area and data area.

■ Flash memory

Note: The flash memory stores the data that is written by the FPU (KPG-141D), tuning data (Deviation, Squelch, etc.) and firmware program (User mode, Test mode, Tuning mode, etc.).

■ SRAM (static memory)

Note: The SRAM has a temporary data area and work area.

6-3. Display Unit

The display unit is composed of the LCD driver IC (IC1), the LCD & Key backlight, etc.

The LCD is controlled using the 4 serial lines (LCDDI, LCDCE, LCDCL, LCDDO) from the ASIC (IC507).

6-4. Key Detection Circuit

The keys are detected using an LCD driver IC (IC1). If a pressed key is detected by IC1, the information is passed to IC507 through the serial line.

6-5. DSP

The DSP circuit consists of a DSP (IC502) and processes the baseband signal. The DSP operates on an external clock of 18.432MHz (the same as the IC507), the I/O section operates at 3.3V and the core section operates at 1.5V. The DSP carries out the following processes:

- 4 level FSK processing
- Analog FM pre-emphasis/de-emphasis
- Vocoder processing between the audio codec and modulation/demodulation
- CAI processing, such as error correction encoding
- QT/DQT encoding/decoding
- DTMF encoding/decoding
- MSK encoding/decoding
- 2-tone encoding/decoding
- Compressor/expander processing
- Voice scrambler processing
- Transmit/receive audio filtering processing
- Microphone amplifier AGC processing
- Audio mute processing
- Modulation level processing

7. Power Supply Circuit

+B is connected to the Final amplifier and the DC/DC converter IC (IC405). IC405 regulates the +B voltage to 5.0V (50M). 50M operates whenever +B is supplied. IC401 (33M) and IC408 (15M) are enabled while the 50M is operating.

33M and 15M provide the power to the ASIC (IC507), DSP (IC502), and Flash memory. At this time the ASIC starts working. The voltage detector IC (IC402) watches the +B voltage. If the +B voltage is higher than 8.6V, IC402 (/BINT) outputs High. If the /BINT signal is high, Q403 (SB SW) is turned on by the SBC signal from the ASIC. (High : SBC=ON, Low : SBC=OFF). When the SB is turned on, IC1 (80C), IC404 (50C), Q402 (80ANT), Q404 (80T), Q415, 416 (150C), Q417 (50R) and Q408 (50CS) start working. IC409, Q409 and Q410 are controlled by the SBC signal. If the SBC signal becomes High, IC409 (33C) operates, and Q409 (33A_2) and Q410 (50MC SW) turn on.

The ASIC sets the TXC signal to High during transmission to the supply power (80T) for the transmission circuit. The ASIC sets the signals (RXC) to High during reception to the supply power (50R) for the reception circuit.

When the ASIC detects the PSW (Power switch) signal, IGN (Ignition sense) signal or /BINT signal, it sets the SBC signal to Low, and turns the transceiver power (SB) off. When D401 and Q401 detect an over-voltage condition, they turn Q403 (SB SW) off, but the ASIC continues to function.

NX-720H(G)/720H

CIRCUIT DESCRIPTION

Fig. 7 Power supply circuit

NX-720H(G)/720H

CIRCUIT DESCRIPTION

8. Signaling Circuit

8-1. Encode (QT/DQT/DTMF/2-tone/MSK)

Each signaling data signal of the QT, DQT, DTMF, 2-tone and MSK is generated by the DSP circuit, superposed on a modulation signal and output from the ASIC (IC507). Each deviation of the TX QT, DQT, DTMF, 2-tone and MSK tones are adjusted by changing the output level of the DSP (IC502) and the resulting signal is routed to the VCO and PLL.

8-2. Decode (QT/DQT/DTMF/2-tone/MSK)

The audio signal is removed from the FM detection signal sent to the DSP circuit and the resulting signal is decoded by the DSP.

9. Compander Circuit

The term “compander” means compressor and expander. The compander reduces noise by utilizing a compressor and an expander. The DSP (IC502) performs this operation. The Compander can be turned on or off using the FPU.

10. GPS Circuit (GPS model only)

The GPS information function can be used by setting it through the FPU. The GPS signal of 1575.42MHz received with the GPS active antenna (with a built-in LNA) is processed by the GPS module (A801) and input to the ASIC (IC507) through the UART port. The ASIC (IC507) processes the GPS data (NMEA) and sends the resulting information to the LCD.

NX-720H(G)/720H

COMPONENTS DESCRIPTION

Display unit (X54-3830-10)

Ref. No.	Part Name	Description
IC1	IC	LCD driver
Q3	Transistor	TX/Busy LED switch
Q6	Transistor	TX/Busy LED switch
Q8	Transistor	LCD Backlight switch
Q9	Transistor	Backlight switch
Q10	Transistor	Status LED switch
Q11	Transistor	Backlight switch
D2	Diode	Line protection
D5-9	LED	Key backlight
D11-21	LED	LCD backlight
D22	LED	Status LED
D23	LED	TX/Busy LED
D24	LED	LCD backlight
D25	Varistor	Line protection
D26	Diode	Key control
D27	Zener diode	Over DC supply protection

TROUBLE SHOOTING

Fault Diagnosis of the BGA (Ball Grid Array) IC

■ Overview

A flowchart for determining whether or not the transceiver can be powered on (the LCD does not function even if the power switch is turned on) due to broken BGA parts.

■ BGA parts

ASIC (IC507), DSP (IC502), FLASH (IC501), SRAM (IC503)

When the BGA IC is problematic, please bring the printed circuit board (X57-8230-12 /-13) in for service. Various ESN/default adjustment values are written on the printed circuit board for service.

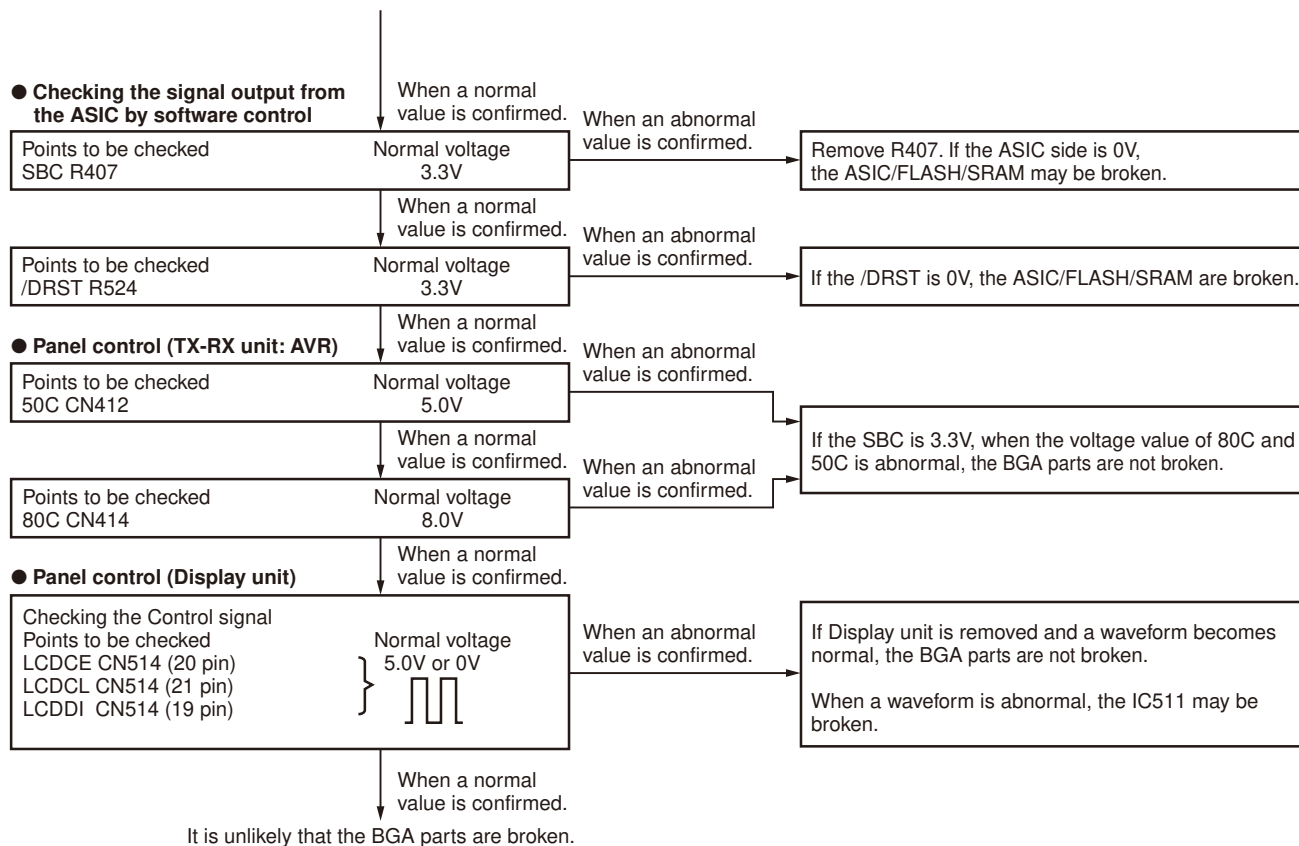

Additionally various ESN stickers are included.

After the printed circuit board has been readjusted, please attach any ESN stickers to the chassis. When "ESN Validation" is used with Trunking, you must modify the ESN register.

● Checking power supply voltage

TROUBLE SHOOTING

● **When an error display appears on the LCD.**

NX-720H(G)/720H

TROUBLE SHOOTING

Failure diagnosis of the GPS section (Built-in GPS model only)

Overview: When the GPS function does not operate, use this flowchart to determine the problem.

Note:

The transceiver supplies the voltage to the GPS antenna and the voltage is checked when the transceiver is turned "ON". When the voltage is lower than the specified value, "G ANT FAIL" is displayed for 2 seconds before entering user mode. (At this time, the expected defect of the GPS antenna is a short. This error message does not appear when the expected defect is an open.)

Major parts for a GPS circuit

- GPS module (A801) : W02-3768-05
- Buffer IC (IC801) : TC7WH126FUF
- Filter (L801) : L79-1958-05
- GPS active antenna : KRA-40 (option)

Replacing TX-RX Unit

■ TX-RX unit Information

Model Name	Frequency Range [MHz]	Original TX-RX unit Number	For Service TX-RX unit Number
NX-720H(G) (GPS model): K	136 - 174	X57-8230-10	X57-8230-12
NX-720H: K	136 - 174	X57-8230-11	X57-8230-13

NX-720H(G)/720H

TROUBLE SHOOTING

SUPPLIED ACCESSORIES

ESN Label	1
• KENWOOD ESN	
• NXDN ESN	
• MPT ESN	
Addendum	1

PRINTED CIRCUIT BOARD DATA

The following data is written on the printed circuit board:

Data Type	Description
Firmware	NX-720/820 K type firmware
FPU Data (PC programming mode)	X57-823: NX-720 Kx type data X57-824: NX-820 Kx type data
Voice Language	English
Various Adjustment Data (PC Test mode)	General adjustment values for the X57-823 (NX-720), and X57-824 (NX-820).
KENWOOD ESN	Model Name: • 136~174MHz NX-720HGS: X57-8230-12 (for GPS model) NX-720HS: X57-8230-13 • 450~520MHz NX-820HGS: X57-8240-14 (for GPS model) NX-820HS: X57-8240-15 • 400~470MHz NX-820HGS: X57-8240-16 (for GPS model) NX-820HS: X57-8240-17 Type: Kx The same number as the KENWOOD ESN label is written.
NXDN ESN/MPT ESN	The same number as the NXDN ESN/ MPT ESN label is written.

AFTER CHANGING THE PCB

1. After changing the printed circuit board, write the up-to-date Firmware following the instructions in the service manual.
 - Write the Firmware in accordance to the Market. If you write different Market Firmware, there are times communication with the FPU is not possible.
2. Using the KPG-141D, select your desired item (Model Name and Frequency) from the Model > Product Information menu, then use Program > Write Data to the Transceiver to write the FPU data (PC Programming mode). When writing to the transceiver, a Warning Message, corresponding to the item selected, appears. Click [OK] to continue writing the data.
3. Enter Program > Test Mode, then adjust the various adjustment data (PC Test mode) as described in the service manual.
4. Attach the new labels corresponding to the new printed circuit board. (Refer to the images below for label placement.)
5. If necessary, write the FPU data used by the customer with the KPG-141D.

Note:

- When using the ESN Validation function of Trunking, the ESN number changes when the circuit board is changed (the number is written on the circuit board); the Trunking system cannot be accessed. Maintain the ESN data of the Trunking System following the new ESN.
- When a new printed circuit board is used, the KENWOOD ESN changes, as does the Transceiver Information display of the KPG-141D, but this does not have any effect on the operation of the transceiver.
- If changing to the original ESN, please contact our service center.

ATTACHING THE ESN LABEL

NX-720H(G)/720H

ADJUSTMENT

Controls

KMC-36 (OPTION)

■ Preparations for checking/tuning the transceiver

Before attempting to check/tune the transceiver, connect the unit to a suitable power supply.

Whenever the transmitter is turned on, the unit must be connected to a suitable dummy load (i.e. power meter).

The speaker output connector must be terminated with a 4Ω dummy load and connected to an AC voltmeter and an audio distortion meter or a SINAD measurement meter at all times during checking/tuning.

Panel Test Mode

■ Test mode operation features

This transceiver has a test mode. To enter test mode, press and hold the [A] key while turning the transceiver power ON. Before the transceiver enters test mode, the frequency version information appears on the LCD momentarily. Test mode can be inhibited by programming. To exit test mode, turn the transceiver power OFF. The following functions are available in test mode.

■ Key operation

Key	“—” not appears on the LCD display	
	Function	Display
[^]/[v]	Test channel up/down	Channel No.
[Δ]	Push: Squelch level up Hold: Squelch off	Squelch level Squelch off: □ icon appears
[■]	Wide/Narrow/Very narrow	Wide: “W” Narrow: “N” Very narrow: “V”
[S]	Shift to panel tuning mode	-
[A]	Function on	“—” appears on the LCD display
[<B]	MSK 1200bps and 2400bps	2400bps: □ icon appears
[C>]	Push: Test signaling up Hold: Test signaling up continuously	Signaling No.
[^]/[v]	Volume level up/down	
[PTT] (MIC)	Transmit	-
[0] to [9] and [#], [*] (MIC)	Use as the DTMF keypad. If a key is pressed during transmission, the DTMF corresponding to the key that was pressed is sent.	-

Key	“—” appears on the LCD display	
	Function	Display
[^]/[v]	Function off	-
[v]	Analog /NXDN	Analog: “A”, NXDN: “N”
[Δ]	Function off	-
[■]	LCD all lights	LCD all point appears
[S]	High /Mid /Low power	High: icon not appears Mid: “—” icon appears Low: “— —” icon appears
[A]	Function off	-
[<B]	Comander on/off	On: □ icon appears
[C>]	Beat shift on/off	On: ◇ icon appears
[^]/[v]	Volume level up/down	
[PTT] (MIC)	Transmit	-
[0] to [9] and [#], [*] (MIC)	Function off	-

NX-720H(G)/720H

ADJUSTMENT

• LED indicator

- Red LED Lights during transmission.
- Green LED Lights when there is carrier.

• LCD display in panel test mode

(Power ON)

Market code

Frequency range
"VHF F1": 136~174MHz

(After 2sec.)

AW : Analog wide mode
AN : Analog narrow mode
NN : NXDN narrow mode
NV : NXDN very narrow mode

■ Frequency and Signaling

The transceiver has been adjusted for the frequencies shown in the following table. When required, readjust them following the adjustment procedure to obtain the frequencies you want in actual operation.

• Test frequency

CH	RX (MHz)	TX (MHz)
1	155.05000	155.10000
2	136.05000	136.10000
3	173.95000	173.90000
4	155.00000	155.00000
5	155.20000	155.20000
6	155.40000	155.40000
7~16	-	-

• Analog mode signaling

No.	RX	TX
1	None	None
2	None	100Hz Square Wave
3	LTR Data: AREA=0, GOTO=12 HOME=12 ID=47, FREE=25	LTR Data: AREA=0, GOTO=12 HOME=12 ID=47, FREE=25
4	QT: 67.0Hz	QT: 67.0Hz
5	QT: 151.4Hz	QT: 151.4Hz
6	QT: 210.7Hz	QT: 210.7Hz
7	QT: 254.1Hz	QT: 254.1Hz
8	DQT: D023N	DQT: D023N
9	DQT: D754I	DQT: D754I
10	DTMF: 159D	DTMF: 159D
11	None	DTMF Code 9
12	2-tone: A: 304.7Hz, B: 3106.0Hz	2-tone: A: 304.7Hz, B: 3106.0Hz
13	Single Tone: 979.9Hz	Single Tone: 979.9Hz
14	None	Single Tone: 1000Hz
15	None	MSK
16	MSK	MSK

NX-720H(G)/720H

ADJUSTMENT

• NXDN mode signaling

No.	RX	TX
1	RAN1	RAN1
2	None	PN9
3	RAN1	Maximum Deviation Pattern
7	None	FSW+PN9 (PC test mode only)
9	Tone Pattern (1031Hz) (Simple BER Measurement)	Tone Pattern (1031Hz)

RAN: Radio Access Number

PN9: Pseudo-Random Pattern (for production only)

No.9 Item: PC test mode only

Panel Tuning Mode

■ Transceiver tuning (To enter tuning mode)

To enter tuning mode, press the [S] key while the transceiver is in test mode. Use the [<B] key to write tuning data through tuning modes, and the [^]/[v] to adjust tuning requirements (1 to 4096 appears on the LCD).

Use the [C>] key to select the adjustment item through tuning modes. Use the [A] key to adjust 5 reference level adjustments, and use the [■] key to switch between Wide/Narrow/Very narrow.

• LCD display in panel tuning mode

■ Key operation

Key	Function	
	Push	Hold (1 second)
[^]/[v]	Adjustment value up/down	
[Δ]	20Hz/2kHz (During transmission in balance adjustment)	-
[■]	Wide/Narrow/Very narrow	-
[S]	Shift to panel test mode	-
[A]	To enter 5 reference level adjustments	-
[<B]	Writes the adjustment value	-
[C>]	Go to next adjustment item	Back to last adjustment item
[^]/[v]	Volume level up/down	
[PTT]	Transmit	
[0] to [9] and [#], [*]	-	

■ 5 reference level adjustments frequency

Tuning point	RX (MHz)	TX (MHz)
Low	136.05000	136.10000
Low'	145.55000	145.60000
Center	155.05000	155.10000
High'	164.55000	164.60000
High	173.95000	173.90000

■ 9 reference level adjustments frequency

Tuning point	RX (MHz)	TX (MHz)
Low1	136.05000	136.10000
Low2	140.80000	140.85000
Low3	145.55000	145.60000

Center3	159.80000	159.85000
High1	164.55000	164.60000
High2	169.30000	169.35000
High3	173.95000	173.90000

NX-720H(G)/720H

ADJUSTMENT

■ Adjustment item supplement

Adjustment Item	Description
Receive Assist	The lock voltage of VCO (Receive) is adjusted. This item must be adjusted before all adjustment items for receiver section are adjusted. This item can be adjusted only in PC Test Mode.
Transmit Assist	The lock voltage of VCO (Transmit) is adjusted. This item must be adjusted before all adjustment items for transmitter section are adjusted. This item can be adjusted only in PC Test Mode.
Frequency	Frequency stability is adjusted under receiving condition with SSG. The SSG needs 0.003ppm accuracy so please use a standard oscillator if necessary. This item can be adjusted only in PC Test Mode so that the adjustment value is not changed easily.
High Transmit Power Limit	High Transmit Power Limit is adjusted.
Mid Transmit Power Limit	Mid Transmit Power Limit is adjusted.
Low Transmit Power Limit	Low Transmit Power Limit is adjusted.
High Transmit Power	High Transmit Power is adjusted.
Mid Transmit Power	Mid Transmit Power is adjusted.
Low Transmit Power	Low Transmit Power is adjusted.
Balance	The transmit audio frequency response is adjusted. This item is adjusted so that the deviation of 2kHz becomes the same deviation of 20Hz. This item must be adjusted before all adjustment items for deviations are adjusted.
Maximum Deviation (NXDN Narrow/Very Narrow)	Maximum Deviation of NXDN (Narrow/Very Narrow) is adjusted.
Maximum Deviation (Analog Wide/Narrow)	Maximum Deviation of Analog (Wide/Narrow) is adjusted. This item must be adjusted before all adjustment items for tone deviations are adjusted. Note: "Maximum Deviation (Analog Narrow)" must be adjusted before "CW ID Deviation (NXDN Very Narrow)" is adjusted.
QT Deviation	QT tone deviation is adjusted.
DQT Deviation	DQT tone deviation is adjusted.
LTR Deviation	LTR tone deviation is adjusted.
DTMF Deviation	DTMF tone deviation is adjusted.
Single Tone Deviation	The deviation of Single Tone used in "2-tone" is adjusted.
MSK Deviation	MSK tone deviation is adjusted.
CW ID Deviation	CW ID tone deviation is adjusted. CW ID is used to inform the others who is transmitting on a 6.25 kHz spacing channel. (In FCC rule, Analog mode or CW ID is required for each channel-spacing.)
Sensitivity 1	Band-Pass Filter is adjusted. The performance of Receive Sensitivity and unwanted signal rejection are improved. This item can be adjusted only in PC Test Mode.
Sensitivity 2	Band-Pass Filter is adjusted. The performance of Receive Sensitivity and unwanted signal rejection are improved. This item can be adjusted only in PC Test Mode.
RSSI Reference	The minimum RSSI level for scan stop is adjusted.
Open Squelch	The squelch level at level "5" is adjusted.
Low RSSI	RSSI display level "VII" is adjusted. Both "Low RSSI" and "High RSSI" must be adjusted. (The curve data of RSSI level is applied.)
High RSSI	
Tight Squelch	The squelch level at level "9" is adjusted.

Test Equipment Required for Alignment

Test Equipment	Major Specifications	
1. Standard Signal Generator (SSG)	Frequency Range Modulation Output When performing the Frequency adjustment, the following accuracy is necessary. • 0.003ppm Use a standard oscillator for adjustments, if necessary.	100 to 520MHz Frequency modulation and external modulation −127dBm/0.1μV to greater than −20dBm/22.4mV
2. Power Meter	Input Impedance Operation Frequency Measurement Capability	50Ω 100 to 520MHz Vicinity of 100W
3. Deviation Meter	Frequency Range	100 to 520MHz
4. Digital Volt Meter (DVM)	Measuring Range Input Impedance	10mV to 20V DC High input impedance for minimum circuit loading
5. Oscilloscope		DC through 30MHz
6. High Sensitivity Frequency Counter	Frequency Range Frequency Stability	10Hz to 1000MHz 0.01ppm or less
7. Ammeter		20A or more
8. AF Volt Meter (AF VM)	Frequency Range Voltage Range	50Hz to 10kHz 1mV to 10V
9. Audio Generator (AG)	Frequency Range Output	50Hz to 5kHz or more 0 to 1V
10. Distortion Meter	Capability Input Level	3% or less at 1kHz 50mV to 10Vrms
11. 4Ω Dummy Load		Approx. 4Ω, 10W
12. Regulated Power Supply		13.6V, approx.20A (adjustable from 9V to 17V) Useful if ammeter equipped
13. Spectrum Analyzer	Frequency Range Input Level Input Sensitivity Resolution Bandwidth Video Bandwidth	40MHz to 520MHz Up to +20dBm −100dBm 100Hz 100Hz
14. Tracking Generator	Frequency Range Output Level	40MHz to 520MHz −30dBm to 0dBm

*The test equipment which is not used for adjustment is contained in this table.

■ Test cable for microphone input (E30-3360-28)

■ Tuning cable (E30-3383-05 or E30-7754-05)

Adapter cable (E30-3383-05 or E30-7754-05) is required for injecting an audio if PC tuning is used.
See "PC Mode" section for the connection.

Illust is E30-3383-05.

ADJUSTMENT

■ Necessary Deviation adjustment item for each signaling and mode

The following shows the necessary adjustment items for each signaling deviation. Please read the following table like the following example. In the case of the signaling "QT (Wide)", this signaling is composed of three elements [Balance, Maximum Deviation (Analog Wide) and QT Deviation (Wide)]. Please adjust Balance and Maximum Deviation (Analog Wide) before adjusting QT Deviation (Wide).

Mode	Signaling	Necessary adjustment and order		
		Wide	Narrow	Very Narrow
Analog	Audio	1. Balance adjust 2. Maximum Deviation (Analog Wide)	1. Balance adjust 2. Maximum Deviation (Analog Narrow)	-
	QT	1. Balance adjust 2. Maximum Deviation (Analog Wide) 3. QT Deviation (Wide)	1. Balance adjust 2. Maximum Deviation (Analog Narrow) 3. QT Deviation (Narrow)	-
	DQT	1. Balance adjust 2. Maximum Deviation (Analog Wide) 3. DQT Deviation (Wide)	1. Balance adjust 2. Maximum Deviation (Analog Narrow) 3. DQT Deviation (Narrow)	-
	LTR	1. Balance adjust 2. Maximum Deviation (Analog Wide) 3. LTR Deviation (Wide)	1. Balance adjust 2. Maximum Deviation (Analog Narrow) 3. LTR Deviation (Narrow)	-
	DTMF	1. Balance adjust 2. Maximum Deviation (Analog Wide) 3. DTMF Deviation (Wide)	1. Balance adjust 2. Maximum Deviation (Analog Narrow) 3. DTMF Deviation (Narrow)	-
	2TONE	1. Balance adjust 2. Maximum Deviation (Analog Wide) 3. Single TONE Deviation (Analog Wide)	1. Balance adjust 2. Maximum Deviation (Analog Narrow) 3. Single TONE Deviation (Analog Narrow)	-
	MSK (FleetSync)	1. Balance adjust 2. Maximum Deviation (Analog Wide) 3. MSK Deviation (Analog Wide)	1. Balance adjust 2. Maximum Deviation (Analog Narrow) 3. MSK Deviation (Analog Narrow)	-
NXDN	Audio	-	1. Balance adjust 2. Maximum Deviation (NXDN Narrow)	1. Balance adjust 2. Maximum Deviation (NXDN Very Narrow)
	CW ID	-	-	1. Balance adjust 2. Maximum Deviation (Analog Narrow) 3. CW ID Deviation (NXDN Very Narrow)

5. Open Squelch *6 (Squelch level 5) [Analog Wide]	1) Adj item: [SQL] Adjust: [*.*.*] 2) Adj item: [S.QL]→ [S.Q.L]→ [S.Q.L.]→ [S.Q.L._.]→ [S.Q.L._._.] SSG output: 12dB SINAD level (MOD: 1kHz/±3kHz)	1) Adj item: [Open Squelch (Analog Wide)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: 12dB SINAD level (MOD: 1kHz/±3kHz)	SSG AF VM 4Ω Dummy load Distortion meter Oscillo- scope		ANT Ext.SP con- nector			[Panel tuning mode] After input signal from SSG, press [<B] key to store the adjustment value. [PC test mode] After input signal from SSG, press [Apply] button to store the adjust- ment value.	“Open Squelch” will not be adjusted correctly if MOD and Deviation are wrong. Remark: During production, a fixed value is written. 138 (Fixed)
[NXDN Very Narrow]	1) Adj item: [SQL] Adjust: [***] 2) Adj item: [S.QL]→ [S.Q.L]→ [S.Q.L.]→ [S.Q.L._.]→ [S.Q.L._._.] SSG output: 12dB SINAD level for Analog Narrow -4dB (MOD: 400Hz/±1.1kHz)	1) Adj item: [Open Squelch (NXDN Very Nar- row)] 2) Adj item: [Low],[Low'], [Cen- ter], [High'], [High] SSG output: 12dB SINAD level for Analog Narrow -4dB (MOD: 400Hz/±1.1kHz)							Adjust with the ana- log signal. This item is adjusted under the condition that MOD is “400Hz” and Deviation is “±1.1kHz” due to the circuit configuration. Remark: During production, a fixed value is written. 171 (Fixed)
*6: Because Open squelch (NXDN Narrow) is adjusted by adjusting Open squelch (Analog Narrow), it is not necessary to adjust Open squelch (NXDN Narrow).									
6. Low RSSI at -118dBm *7 [Analog Narrow]	1) Adj item: [LRSS] Adjust: [***] 2) Adj item: [L.RSS]→ [L.R.SS]→ [L.R.S.S]→ [L.R.S.S.]→ [L.R.S.S._.] SSG output: -118dBm (0.28uV) (MOD: 1kHz/±1.5kHz)	1) Adj item: [Low RSSI (Analog Narrow)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: -118dBm (0.28μV) (MOD: 1kHz/±1.5kHz)	SSG		ANT Ext.SP con- nector			[Panel tuning mode] After input signal from SSG, press [<B] key to store the adjustment value. [PC test mode] After input signal from SSG, press [Apply] button to store the adjustment value.	
[Analog Wide]	1) Adj item: [LRSS] Adjust: [*.*.*] 2) Adj item: [L.RSS]→ [L.R.SS]→ [L.R.S.S]→ [L.R.S.S.]→ [L.R.S.S._.] SSG output: -118dBm (0.28uV) (MOD: 1kHz/±3kHz)	1) Adj item: [Low RSSI (Analog Wide)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: -118dBm (0.28μV) (MOD: 1kHz/±3kHz)							

NX-720H(G)/720H

ADJUSTMENT

Item	Condition		Measurement			Adjustment			Specifications/ Remarks
	Panel tuning mode	PC test mode	Test-equipment	Unit	Terminal	Unit	Parts	Method	
6. Low RSSI at -118dBm *7 [NXDN Very Narrow]	1) Adj item: [LRSS] Adjust: [***] 2) Adj item: [L.RSS]→ [L.R.SS]→ [L.R.S.S]→ [L.R.S.S.]→ [L.R.S.S._] SSG output: -118dBm (0.28uV) (MOD: 1kHz/±1.5kHz)	1) Adj item: [Low RSSI (NXDN Very Narrow)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: -118dBm (0.28μV) (MOD: 1kHz/±1.5kHz)	SSG		ANT Ext.SP con- nector			[Panel tuning mode] After input signal from SSG, press [<B] key to store the adjustment value. [PC test mode] After input signal from SSG, press [Apply] button to store the adjustment value.	Adjust with the analog signal.
*7: Because Low RSSI at -118dBm (NXDN Narrow) is adjusted by adjusting Low RSSI at -118dBm (Analog Narrow), it is not necessary to adjust Low RSSI at -118dBm (NXDN Narrow).									
7. High RSSI at -80dBm *8 [Analog Narrow]	1) Adj item: [HRSS] Adjust: [***.] 2) Adj item: [H.RSS]→ [H.R.SS]→ [H.R.S.S]→ [H.R.S.S.]→ [H.R.S.S._] SSG output: -80dBm (22.4uV) (MOD: 1kHz/±1.5kHz)	1) Adj item: [High RSSI (Analog Narrow)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: -80dBm (22.4μV) (MOD: 1kHz/±1.5kHz)	SSG		ANT Ext.SP con- nector			[Panel tuning mode] After input signal from SSG, press [<B] key to store the adjustment value. [PC test mode] After input signal from SSG, press [Apply] button to store the adjustment value.	Adjust with the analog signal.
[Analog Wide]	1) Adj item: [HRSS] Adjust: [*.*.*] 2) Adj item: [H.RSS]→ [H.R.SS]→ [H.R.S.S]→ [H.R.S.S.]→ [H.R.S.S._] SSG output : -80dBm (22.4uV) (MOD: 1kHz/±3kHz)	1) Adj item: [High RSSI (Analog Wide)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: -80dBm (22.4μV) (MOD: 1kHz/±3kHz)							
[NXDN Very Narrow]	1) Adj item: [HRSS] Adjust: [***] 2) Adj item: [H.RSS]→ [H.R.SS]→ [H.R.S.S]→ [H.R.S.S.]→ [H.R.S.S._] SSG output : -80dBm (22.4uV) (MOD: 1kHz/±1.5kHz)	1) Adj item: [High RSSI (NXDN Very Narrow)] 2) Adj item: [Low], [Low'], [Center], [High'], [High] SSG output: -80dBm (22.4μV) (MOD: 1kHz/±1.5kHz)							
*8: Because “RSSI at -80dBm adjust” of NXDN Narrow is adjusted by adjusting “RSSI at -80dBm adjust [Analog Narrow]”, it is not necessary to adjust “RSSI at -80dBm adjust” of NXDN Narrow.									

NX-720H(G)/720H

LEVEL DIAGRAM

Receiver Section

To make measurements in the AF section, connect the AC level meter. (ANT input: -53dBm, 1kHz FM, 3kHz DEV (Wide))
 In the RF section, use a 1000pF coupling capacitor.
 (The display shows the SSG input value required to obtain 12dB SINAD without local level.)

Transmitter Section

MIC input : 3kHz DEV.(Wide), 1.5kHz DEV.(Narrow) at 1kHz MOD.
 Transmitting frequency : Center frequency

NX-720H(G)/720H

OPTIONAL ACCESSORIES

KRA-40 (GPS ACTIVE ANTENNA)

■ Specifications

Operating Temperature	-22°F ~ +185°F (-30°C ~ +85°C)
Water Performance.....	IPx7
Center Frequency	1575.42MHz
Output Impedance	50Ω
Dimensions (Cable not included)	
.....	1.30 x 1.42 x 0.50 in (33 x 36 x 12.8 mm)
Cable length	Approx. 5 m

■ External View

83

NX-720H(G)/720H

SPECIFICATIONS

GENERAL

Frequency Range	136~174MHz
Number of Channels.....	260
Zones.....	128
Max. Channels per Zone	250
Channel Spacing	Analog: 12.5/15/25/30kHz Digital: 6.25/12.5kHz
Operating Voltage	13.6V DC $\pm 15\%$
Operating Temperature Range	-22°F~+140°F (-30°C~+60°C)
Frequency Stability	± 1.0 ppm
Antenna Impedance	50 Ω
Dimensions (W x H x D)	6.30 x 1.69 x 5.35 in. (160 x 43 x 136 mm) (Projections not included)
Weight	2.87 lbs. (1.30 kg)

RECEIVER

Sensitivity	Digital @6.25kHz (3% BER): 0.20 μ V Digital @12.5kHz (3% BER): 0.28 μ V Analog 12dB SINAD: 0.25 μ V
Selectivity	Analog @25kHz: 80dB Analog @12.5kHz: 70dB
Intermodulation Distortion	Analog: 70dB (± 50 , 100kHz)
Spurious Response	Analog: 85dB
Audio Distortion	Less than 3%
Audio Output	4W/4 Ω

TRANSMITTER

RF Power Output	5-30-50W
Spurious Response	73dB
FM Hum and Noise (Typ).....	Analog @25kHz: 50dB Analog @12.5kHz: 45dB
Modulation	16K0F3E, 11K0F3E, 8K30F1E, 8K30F1D, 8K30F7W, 4K00F1E, 4K00F1D, 4K00F7W, 4K00F2D

Analog measurements made per TIA/EIA 603 and specifications shown are typical.
